

Overview: BTCR9

fanSync is a mobile application that uses Bluetooth technology to communicate with fanSync hardware and allows the user to control many features of his or her ceiling fan, all using an iOS or Android device. Users can easily control the light and speed components of the fan, and set the fan on a timer. fanSync is currently compatible with most fans that utilize an AC motor and is not brand specific, meaning it is compatible with fans that are not Fanimation made. With fanSync, users may use one device to control multiple fans, or control one fan on multiple devices.

The BTCR9 is a complete kit that includes both a Bluetooth receiver and a remote control with wall mount. Compatible with fans that have up to one light kit.

Special Features:

- User friendly, easy to pair phone and fan
- 3-speed fan control
- Lighting control: on, off, dimming
- Timer function
- Control one fan with multiple devices
- Control multiple fans with one device
- Favorites list
- Safe exit
