

Installation Guide

1. Disassemble the bottom of the desktop and place it flat on the ground (the top of the desktop is not removed for now only to protect it from scratches)
2. Then dismantle the four legs of the table. Place them on both sides of the desktop (as shown in the picture) and secure them with self tapping screws (an electric drill is required here).
3. Next, install the adjustment feet on each of the four legs.
Installation completed.
