

5-PIECE TRADITIONAL BORDER FENCE

Read this manual carefully before use and save it for future reference.

INSTALLATION

Insert the first panel into the ground. Align the flat side of the second panel with the hole on the first panel and insert the legs into the ground. Repeat until all panels have been installed.

General Use & Care

INSTALLATION: Install into firm soil, installing into loose soil may cause the fence to lean or tip over. Do not install fencing into rocks, sand as it may damage the finish.

CLEANING: Wet a soft cloth with clean water and wipe away dirt and debris.

SCRATCHES: The powder coating on the fencing is tough & durable but, even under normal use, some scratching is inevitable. Scratches can be repaired with a rust-resistant paint. **NOTE:** the one-year warranty does not cover defects or damage caused by painting and/or repairs.

WINTER CARE & STORAGE: Storing this item during winter, especially in locations with ice and snow is highly recommended. Move it to an indoor location that is cool and dry. Covering with a breathable cover while in storage will help prevent dust build-up.

Troubleshooting

THE FENCE POST WON'T GO FAR ENOUGH INTO THE GROUND

- Make sure there are no obstacles within the soil such as rocks, tree roots, or pavement.
- The soil may be too dry. Soak the soil with water and try inserting the panels again.

Any modification to the product or failure to follow recommended care will void the product warranty.
