Door closed position

Section drawing

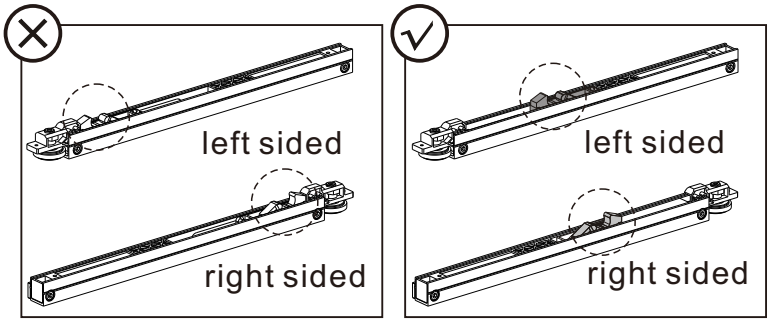

1 Mount aluminum track (C)on door (J)

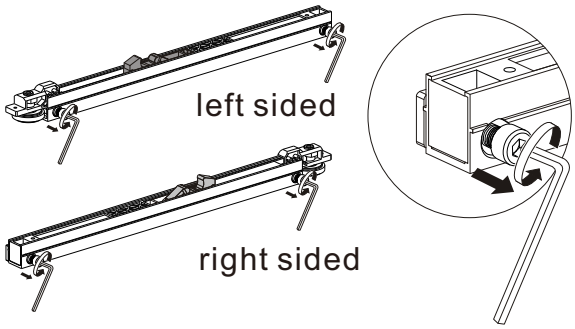

2 Mount soft close kits(B)

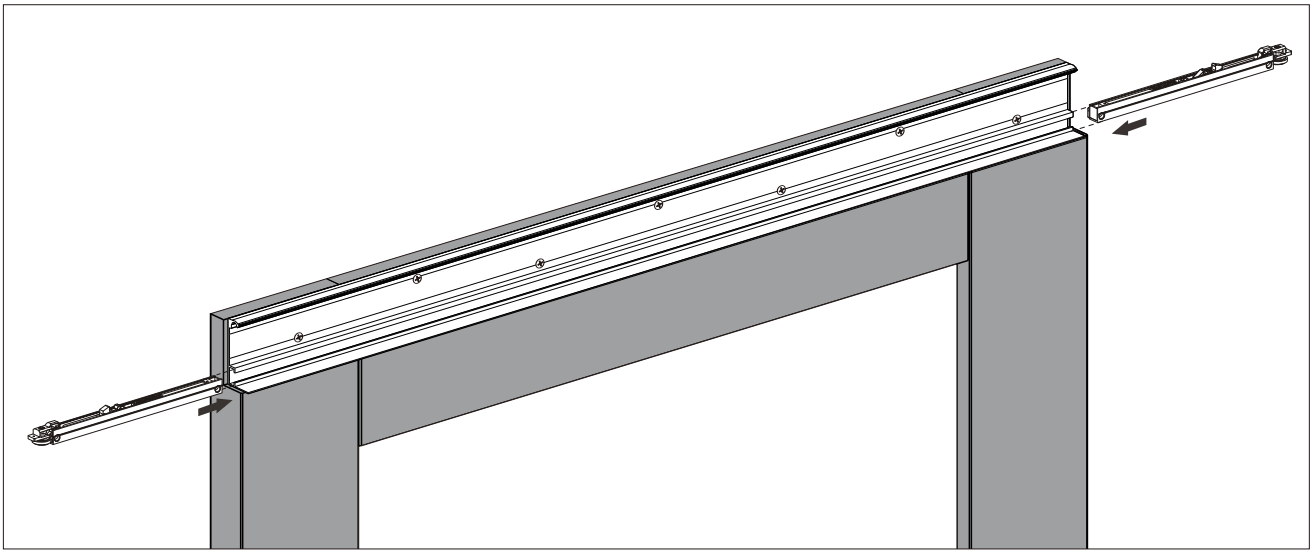

① Activate soft close devices by hand

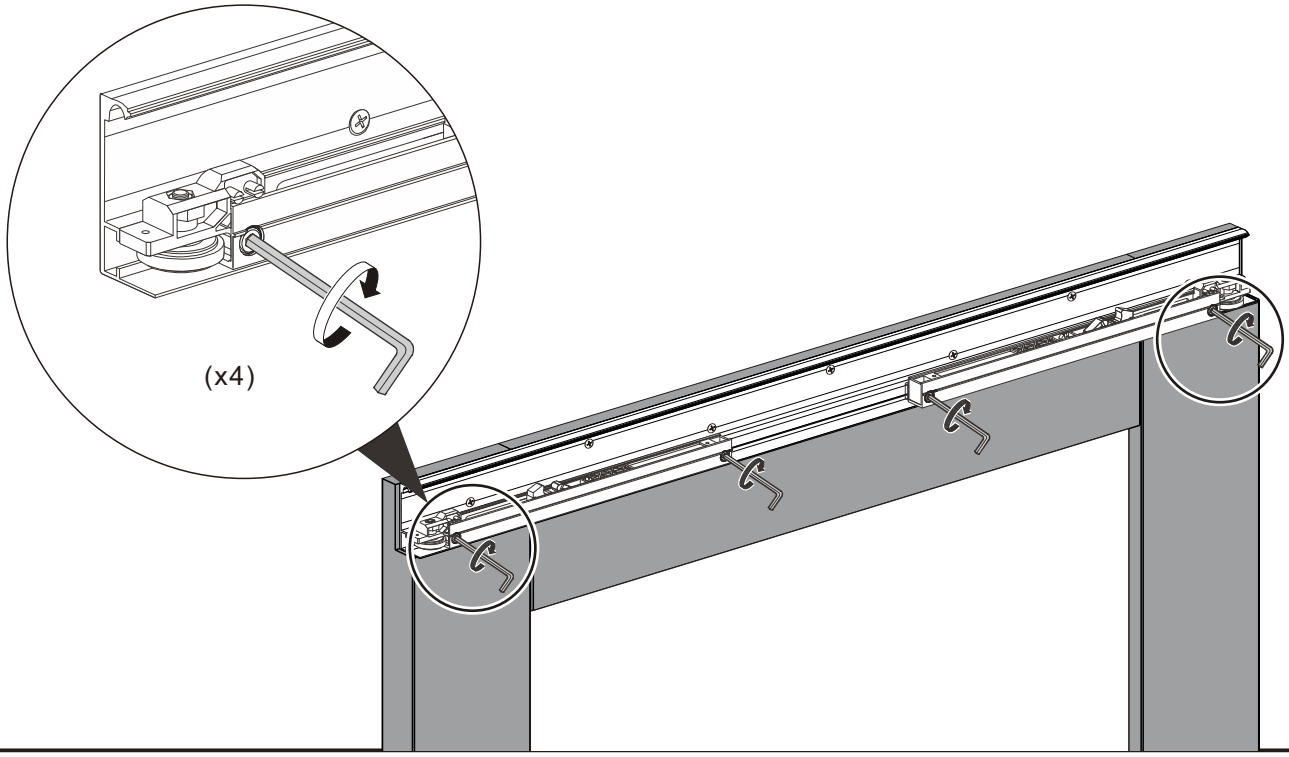

② Loosen screw on both ends of soft close device

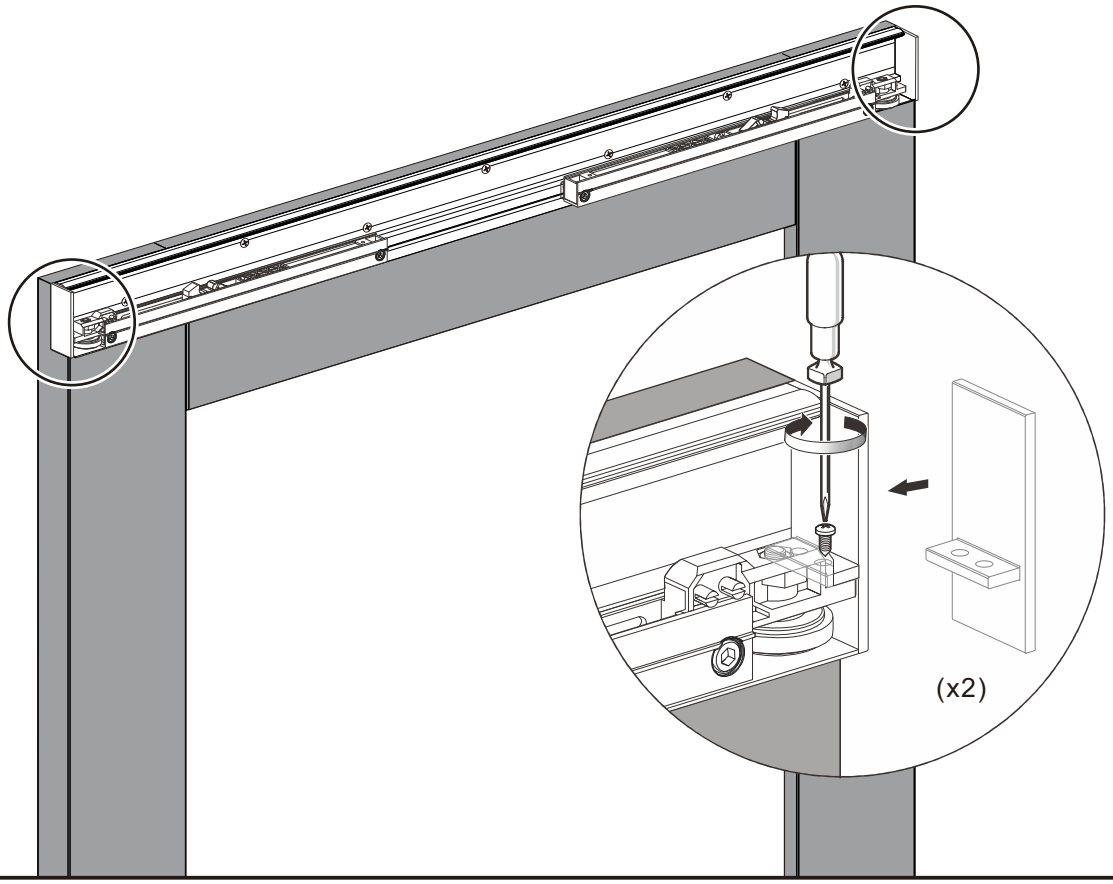

③ Slide both left sided and right sided soft close devices in the track(C)

④ Ensure it is flush with the end of track(C) and fasten the screw

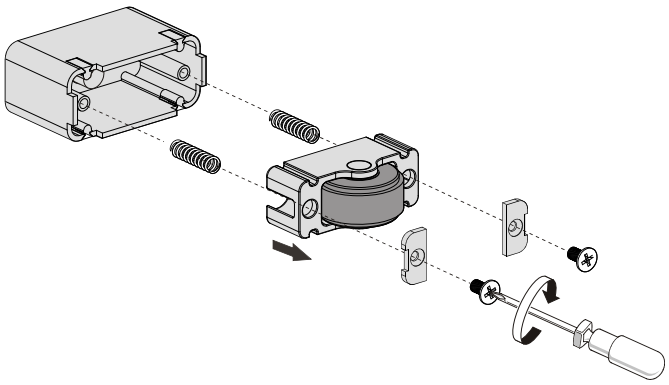

3 Fasten caps(D) onto both ends of track

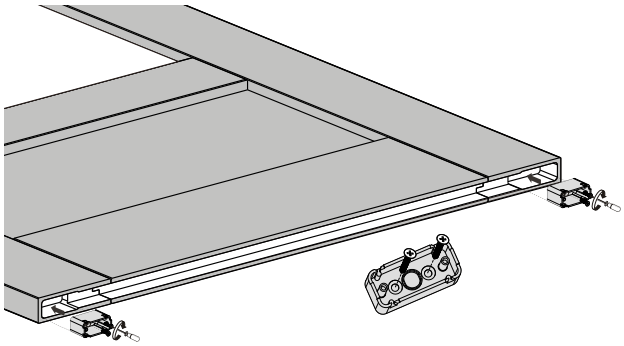

4 Install bottom roller(E) and guide channel(F) inside the slot of door slab(J)

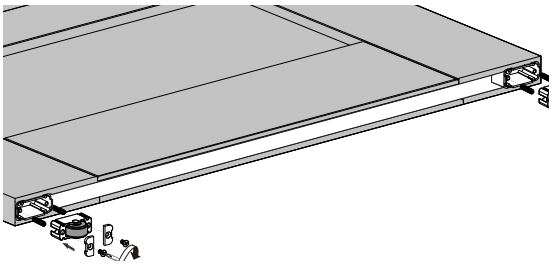

① Remove the wheel from the case

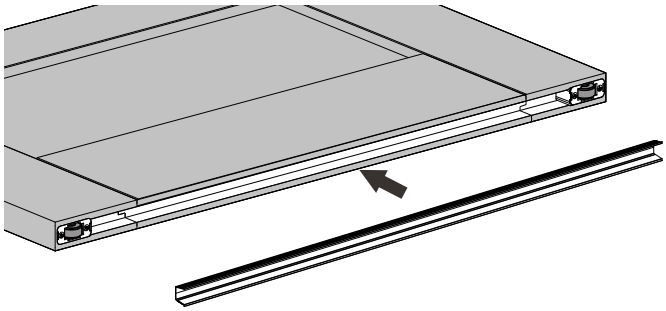

② Fasten bottom roller case inside the bottom of door slab

③ Fasten the wheel inside the case

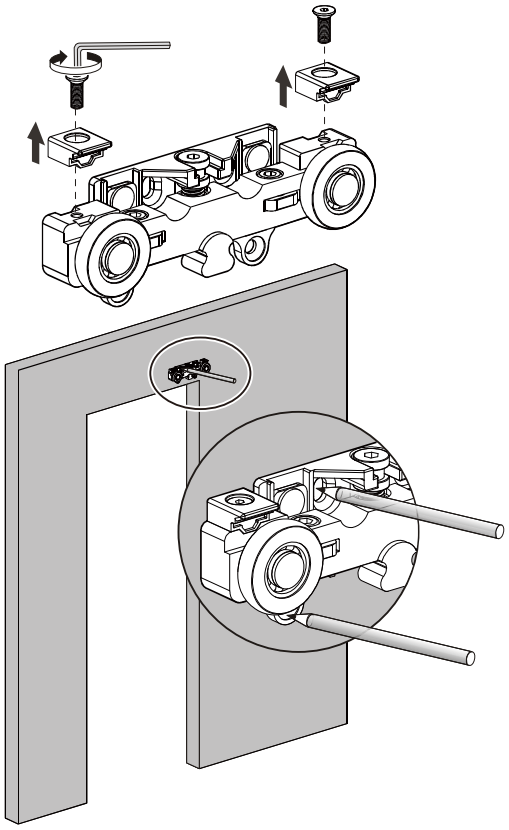

④ Press fit guide channel inside the slot

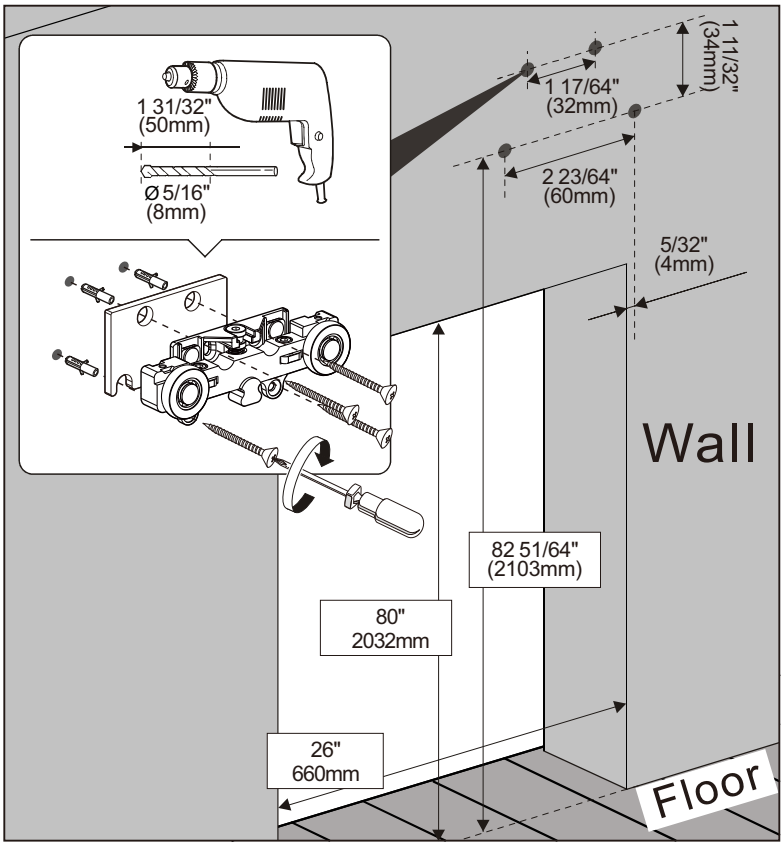

5 Mount adjustable top roller(A) and mount floor guide(G)
NOTE: top roller assembly must be installed into wall blocking.

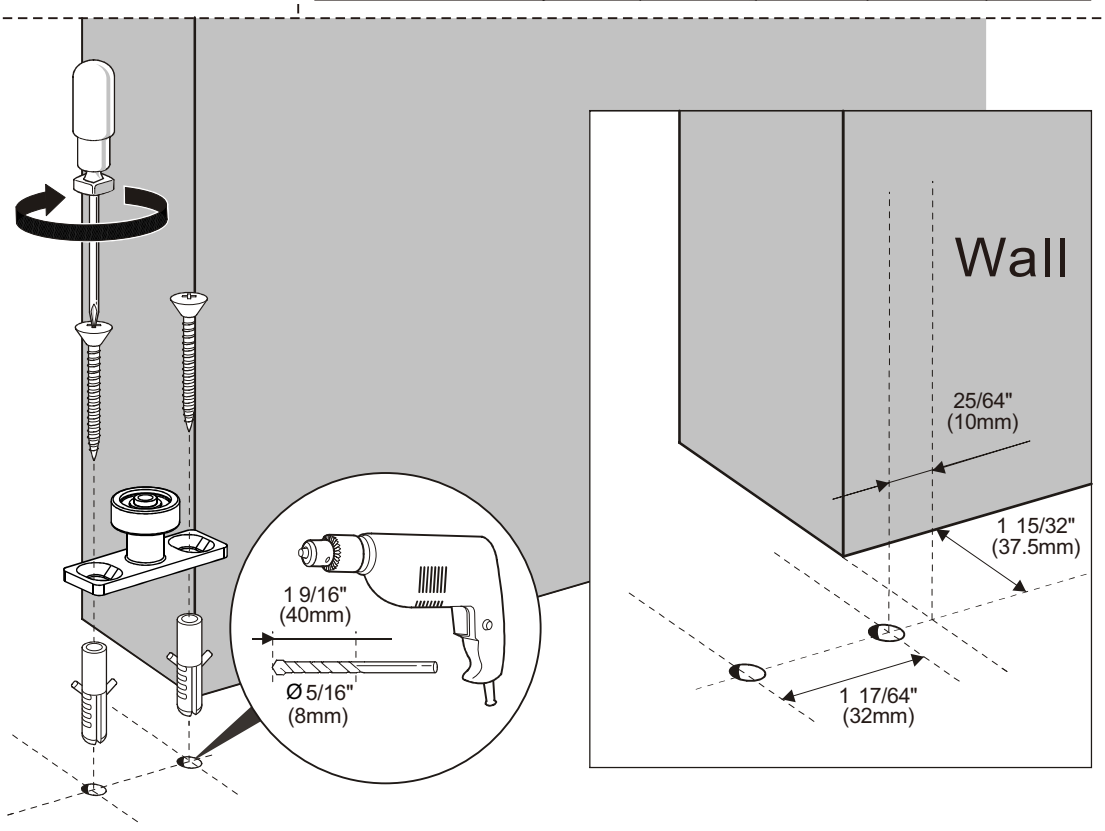

Door opening size:26x80"

① Loose the screw and remove anti-jump block

② Fasten the top roller onto wall through spacer(I)

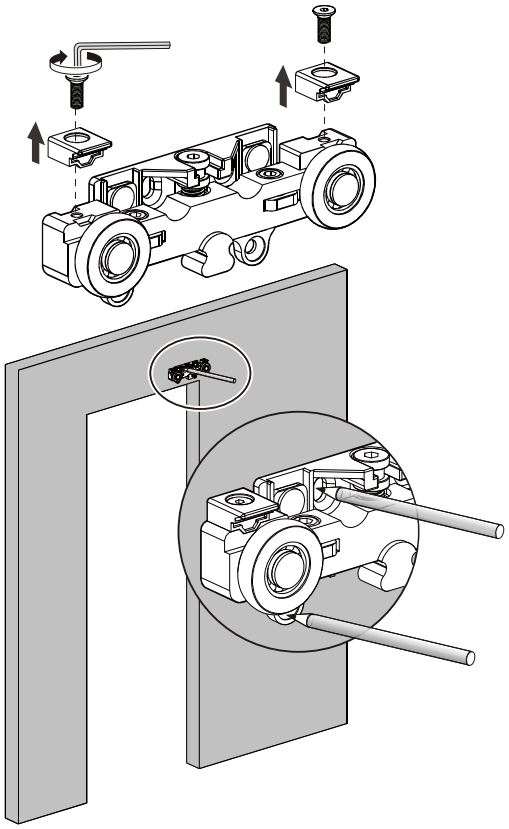

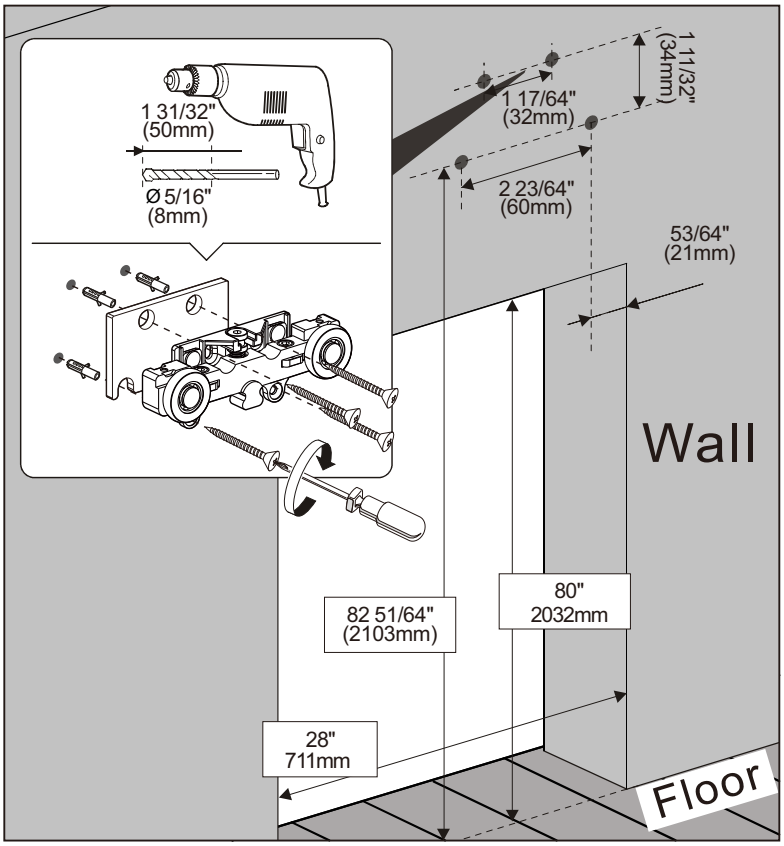

5 Mount adjustable top roller(A) and mount floor guide(G)
NOTE: top roller assembly must be installed into wall blocking.

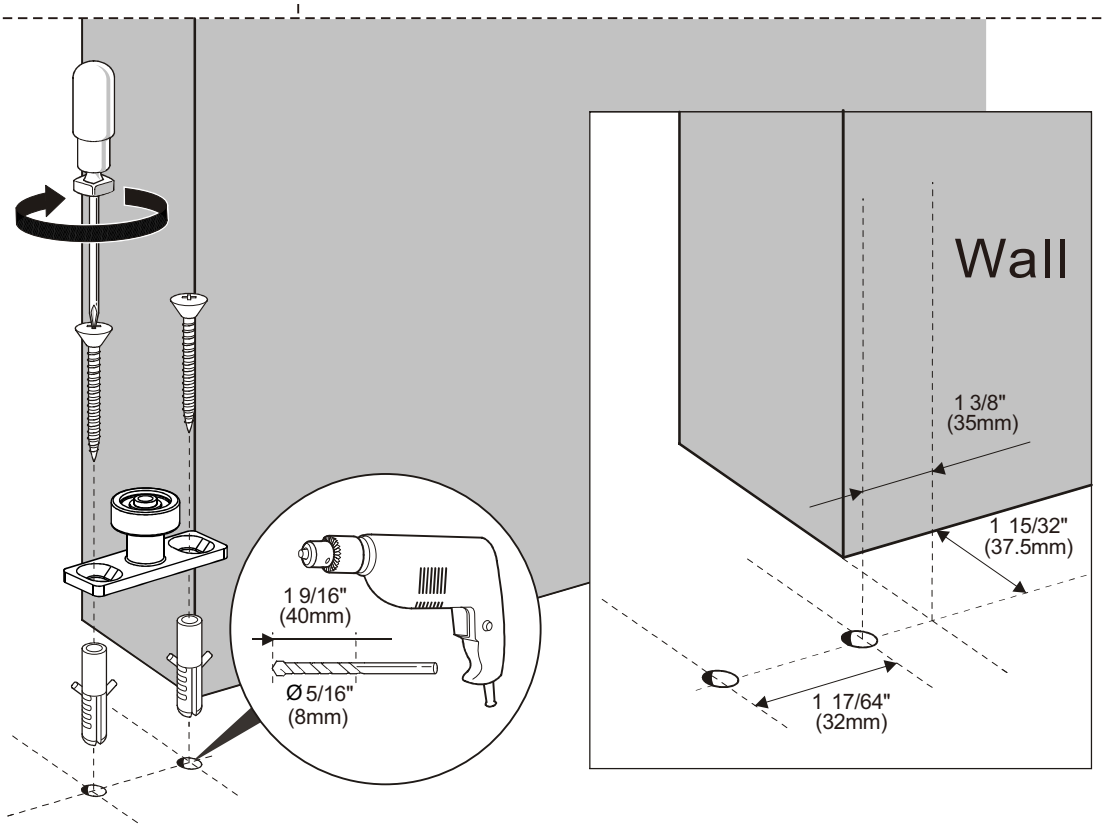

Door opening size:28x80"

① Loose the screw and remove anti-jump block

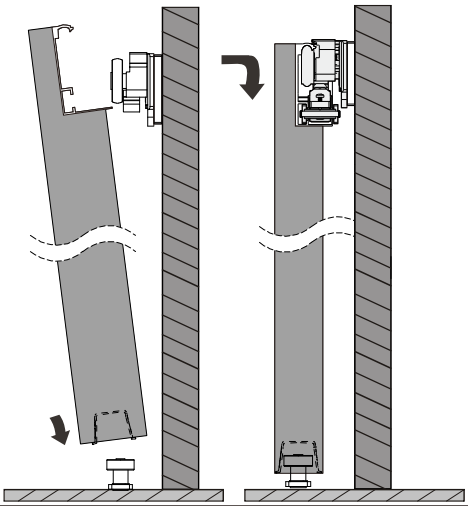

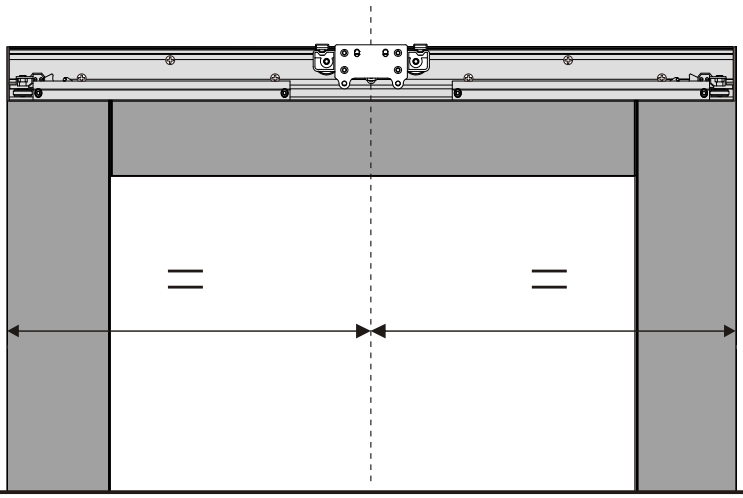

② Fasten the top roller onto wall through spacer(I)

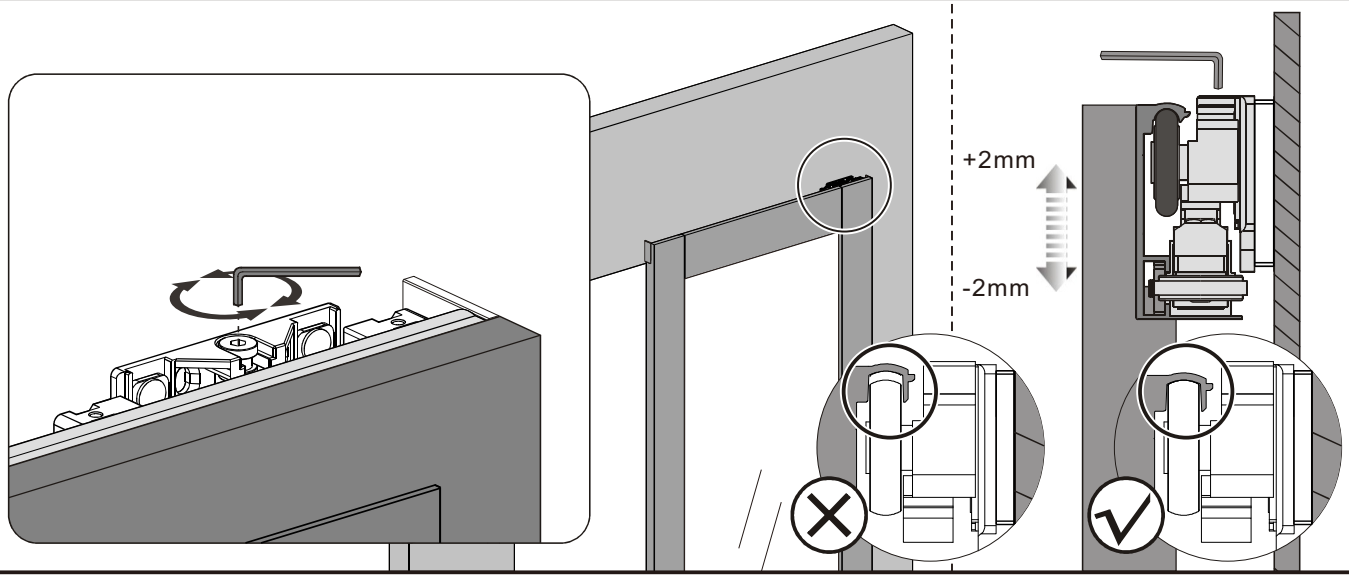

6 Install door slab(J) onto top track(C) and slide the door slab to ensure top roller(A) is at the center of track(C) horizontally

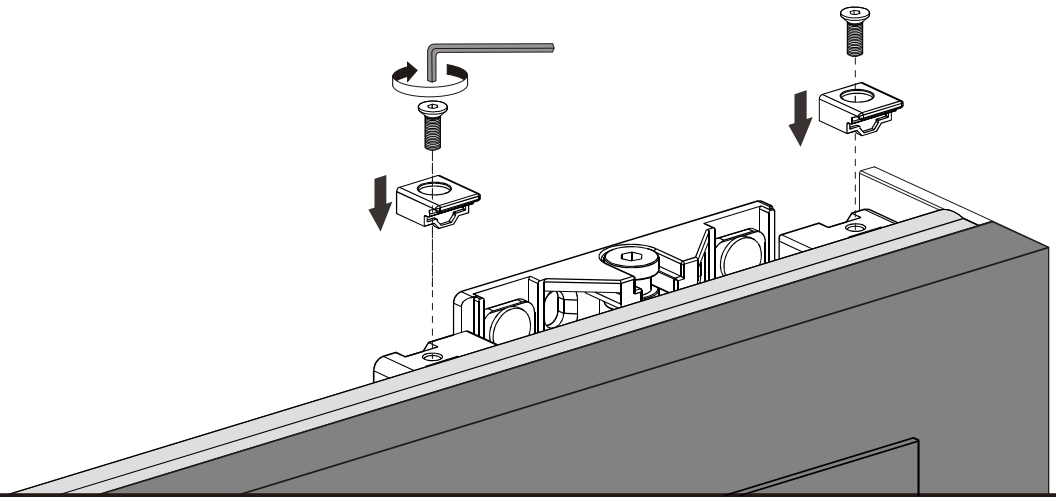

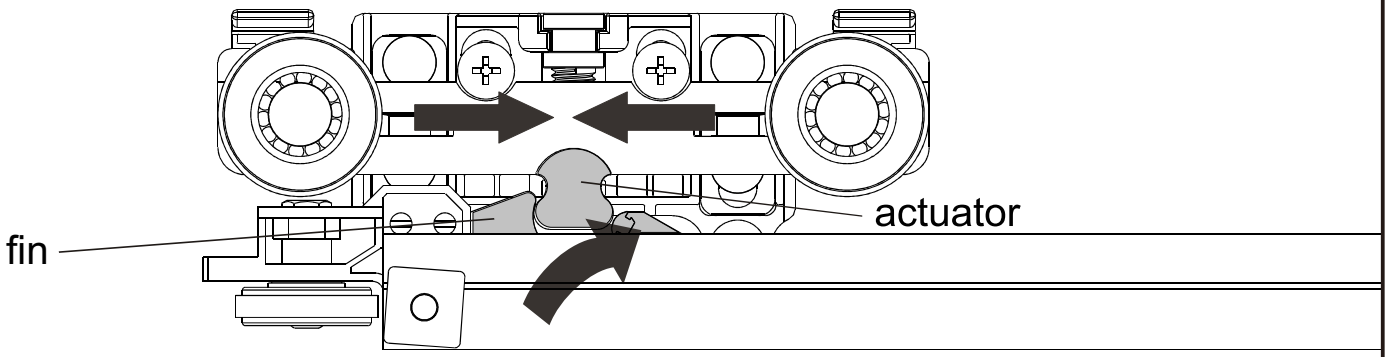

7 Fasten the screw to adjust the hanger height to ensure wheel touches the upper inside of track

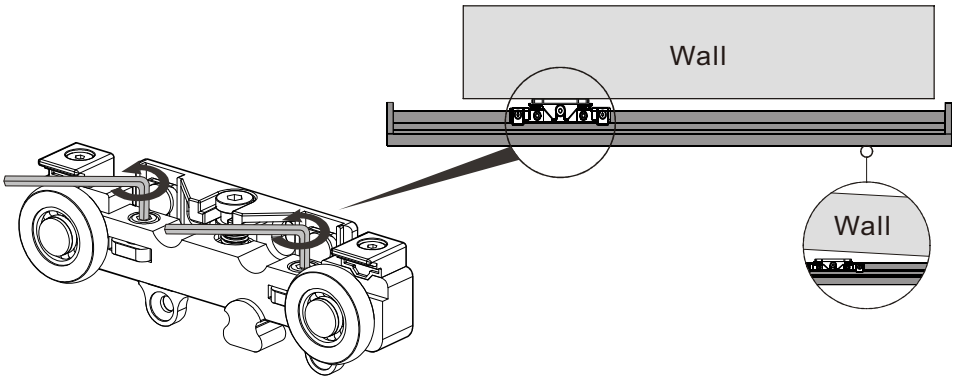

8 Tighten the anti-jump block

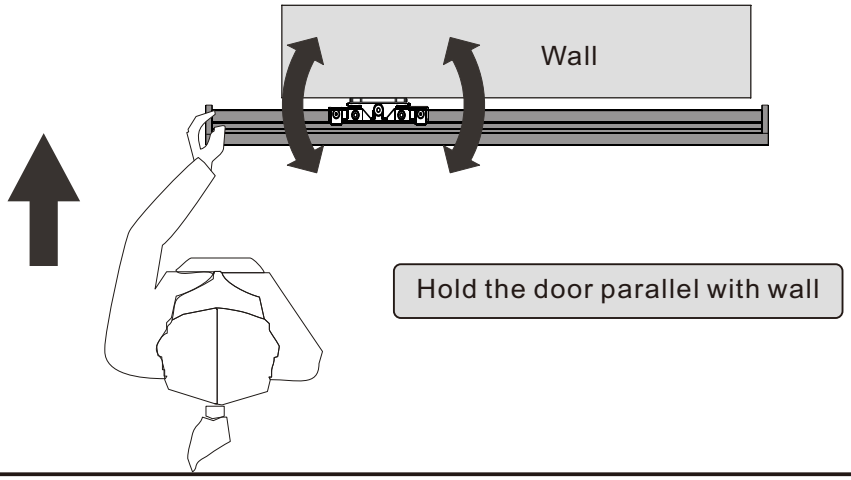

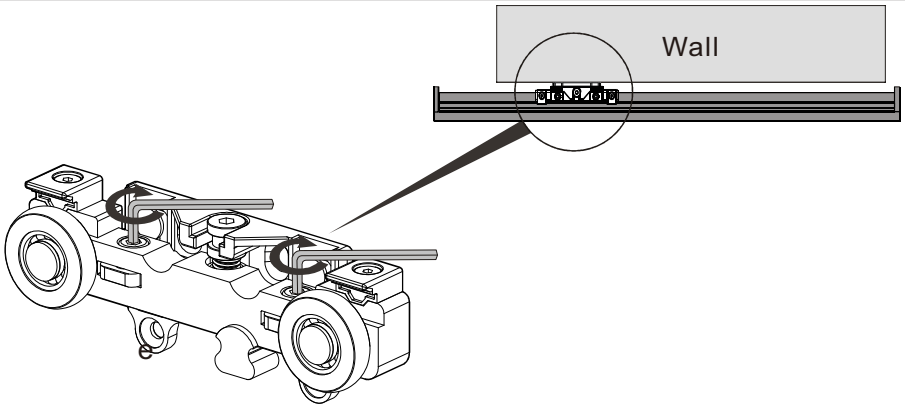

9 Slide the door slab both left and right to ensure actuator is in between the fin of soft close device

10 Adjust the tightness of the screw to ensure door slab(J) is parallel with wall

11 install flush pull(H) onto both sides of door slab(J)
