

Desk Installation Instruction

Installation Steps

Step 1: Place the tabletop upside down

Lay the sintered stone tabletop face down on a soft mat, carpet or clean floor to prevent scratches and bumps on the surface and edges, exposing the underside for assembly work

Step 2: Mount and secure both table legs

Align the table legs with pre-drilled holes on the tabletop bottom, insert the matching screws and tighten them gradually. Make sure the legs are vertical, symmetrical and firmly fastened to lay a solid foundation for desk stability

Step 3: Install the recessed tabletop power socket

1. Insert the socket unit into the reserved square opening from above the tabletop, then adjust it to sit flush with the tabletop with uniform gaps around
2. Fasten the socket panel with supplied screws from underneath the tabletop to prevent shaking
3. Neatly arrange and store the power cord under the tabletop to avoid tangling or damage from squeezing

Step 4: Flip the desk upright and level it

Two people carefully turn the desk right-side up and move it to its designated position.

Gently rock the desk to check stability; adjust the foot pads at the bottom of legs if tilted, to keep the tabletop horizontal and the whole structure sturdy
