If you decide to use a power driver:

- Make sure to have the appropriate Phillips bits.
- Start using at a low torque or speed to avoid stripping the screws.

BEFORE YOU START THE ASSEMBLY, PLEASE READ THE FOLLOWING TIPS AND WARNINGS.

- Do not discard this manual or any of the packaging material until the unit is completely assembled.
- Please read the assembly instructions thoroughly and follow step by step.

- The assembly might require of 2 persons for certain steps. Before you start the installation, make sure there is someone else nearby to help you.

- Make sure you understand which hardware will be used on each step. Using the wrong size of screw, bolt or pin might strip the threads or cause damage to the part in which it is being used.

- To avoid misalignments, always leave the screws loosely and do not tighten them until all the pieces are positioned correctly.
- Do not overtighten or force the screws as they might break, strip, damage the threads of the holes, or get stuck inside the parts.

- If the hole seems to small for the screw, make sure you are using the correct size of screw and/or that you are installing it in the correct hole.

- Sometimes on the wood panels the laminate or material might be covering the hole partially or entirely, if there is no visible hole or if it looks too small, pass and press the tip of your finger over the area to feel its indentation, and carefully pierce the laminate to uncover the hole underneath.

- After the item is assembled, you can use rubbing alcohol to erase or remove the visible part numbers printed or labeled on the pieces.

- Please be kind to our planet, when done with the assembly, recycle any of the packaging materials that is accepted by your city or recycling service.

Thank you!

THE ASSEMBLY STEPS START ON NEXT PAGE

CAM BOLT AND CAM LOCK TUTORIAL

**THE INSTRUCTIONS BELOW
ARE NOT ACTUAL ASSEMBLY STEPS**

**This unit uses cam bolts and locks (also known as mini fixes).
If you are not familiar with this kind of hardware, the below is a tutorial
that explains how to use them on the steps where they are required.**

1. Screw the bolt into the indicated hole on the panel indicated in the assembly step.

2. Join the other panel (with the big hole) to the panel with the bolt. If it comes with the cam locks already pre-installed, make sure to align them to receive the bolt's head (refer to point 3). There might be a very small gap between the panels which is normal.

If the cam locks come pre-in stalled, make sure they are aligned (see point 3).

3. Insert the cam lock on the panel with the big hole making sure it goes aligned to receive the bolt's head.

4. Use a Phillips screwdriver to turn the cam lock clockwise. This will lock the panels together and also will close any gaps.
