COMMON PROBLEMS

Problems	Cause analysis	Solutions
Product inflation cannot reach saturation	Whether the air outlet zipper is closed	Close the product air tube and zippers under the Santa Clau's feet and gift bag
	Whether the connection between the air tube and the air blower is firm	After turning off the air blower, use the binding rope to fasten the air blower
	Whether the power cord is extended causing insufficient voltage	Please keep the power supply close to the Santa Claus. It is forbidden to connect long wires without permission. Forbid dangerous use of electricity!
	Whether the air blower is damaged	Take a video of the power failure to contact customer service and explain the situation, and the manufacturer will make a diagnosis

Air leak from the seams is necessary because the product is inflated by constant air flow and this leakage is required to stop the product becoming over-inflated.
