Tuya APP networking process:

No.1 Tuya app download

Search for the "Tuya Smart" APP in each application market, and download and install it.

No.2 Registration/Login

Registration: If you do not have an APP account, you can choose to register or log in through an SMS verification code. This and the next page describe the registration process. 1. Click

"Create New Account" to enter the privacy policy page of the Tuya Smart Platform. After clicking Agree, you will officially enter the registration page of the mobile phone number. 2.

The system automatically determines the current country/region, and you can also manually select the country/region. After entering the mobile phone number or email address, click

"Get Verification Code", enter the received verification code, then enter the password, and click "Finish" to complete the registration.

No.3 Add equipment

First, press and hold the button on the control box until the light flashes; then click "Add Device" or the "+" on the upper right of the APP home page to enter the add page, and when "Discover Device" appears, click Add, and select the device working area to connect to the Internet Wi-Fi and enter the Wi-Fi password, click "OK" to enter the network distribution process, if you choose the default mode for network distribution, the percentage of network distribution progress will be displayed, and the device with successful network distribution can modify the name, or select the room location (If the network configuration fails, the APP will display that the connection has timed out, and you can choose to re-add or view the help).

ALEXAP distribution network process:

Note: Configure the App to modify the device name to a name that Alexa can easily recognize, usually in English, such as "bed light"

1. Configure the Amazon Echo device (if you have already configured the Amazon Echo, you can skip this step, the following instructions are based on the IOS client.
