Step 1

Make sure the pins are installed correctly as shown with the “check mark” below:

Below shows how the pins are used to assemble the panels together.

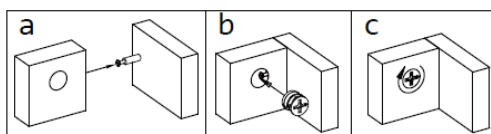

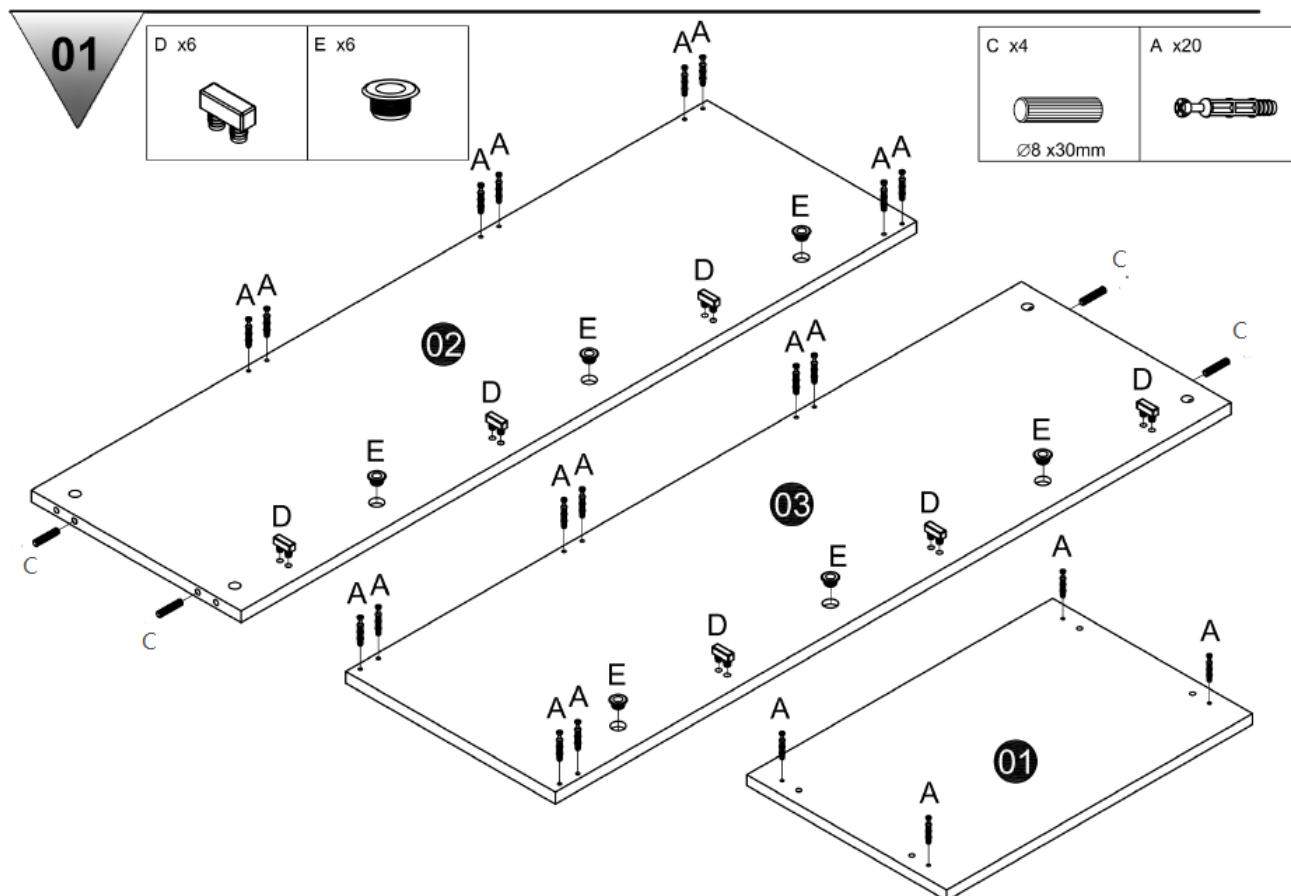

FIGURE A

Place panels (1, 2, 3) on a soft flat surface. Insert and screw in A as seen below. Insert D and E as seen below. Insert C to inner top hole of panels (2, 3).

----------------------	---

Step 6

Secure cabinet to the wall using hardware (G), see image below.

Installation Tips

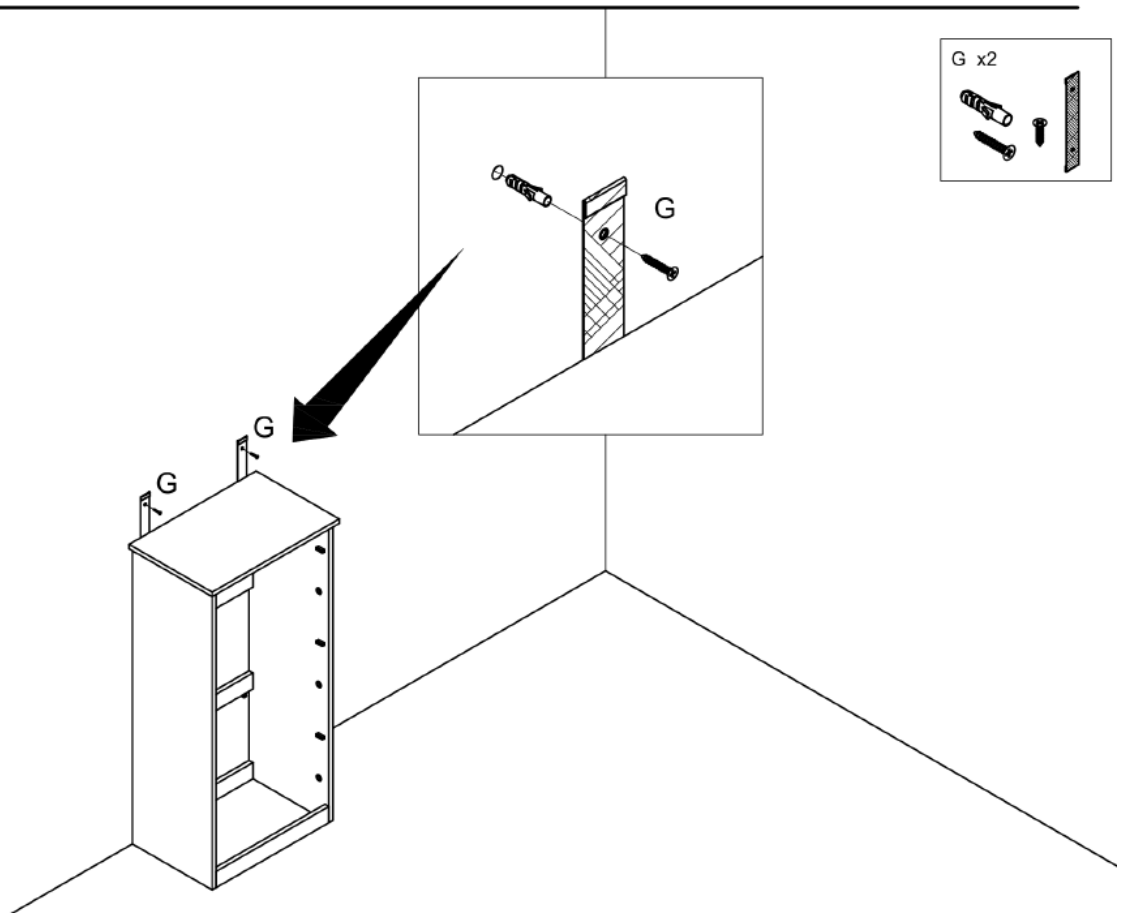

Measure the distance between the hardware on the cabinet using a measuring tape.

Locate the stud in the wall or joist in the wall where you plan to mount the storage cabinet. Use a stud finder or tap the wall lightly with a hammer. A solid thud indicates a stud, while a hollow sound means no stud is present. Mark the storage cabinet hardware measurement on the wall with a pencil. When possible, all screws used to secure the storage cabinet to the wall should be in a stud.

Drill a pilot hole through the drywall and into the stud at the marked location. Use a drill bit one size smaller than the mounting screws.

Drill a hole slightly larger than a toggle bolt for any mounting screws that won't be located in the stud. Toggle bolts have a metal sheath that opens like wings. These wings anchor the screw when no stud is present and can support loads of 25 pounds or more without damaging the wall.
