

Suggested Shutter Installation Instructions

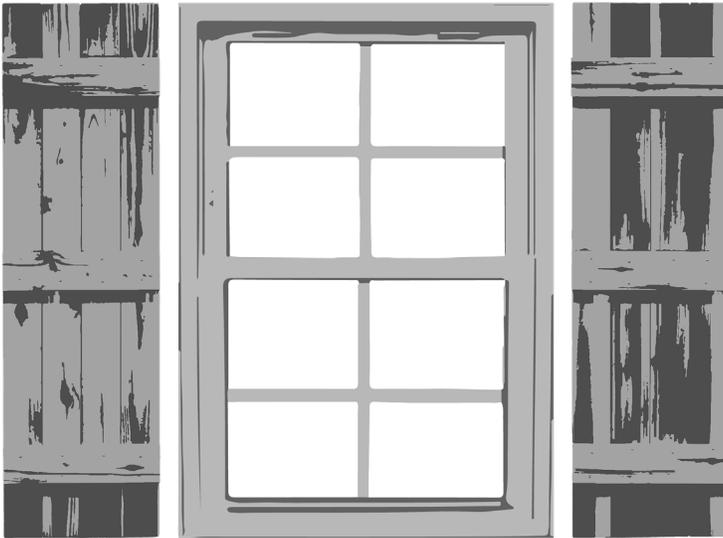

1. Parts included with your order:

- 2 shutters
- 10 fasteners (5 for each shutter)
- 10 wall anchors (5 for each shutter)

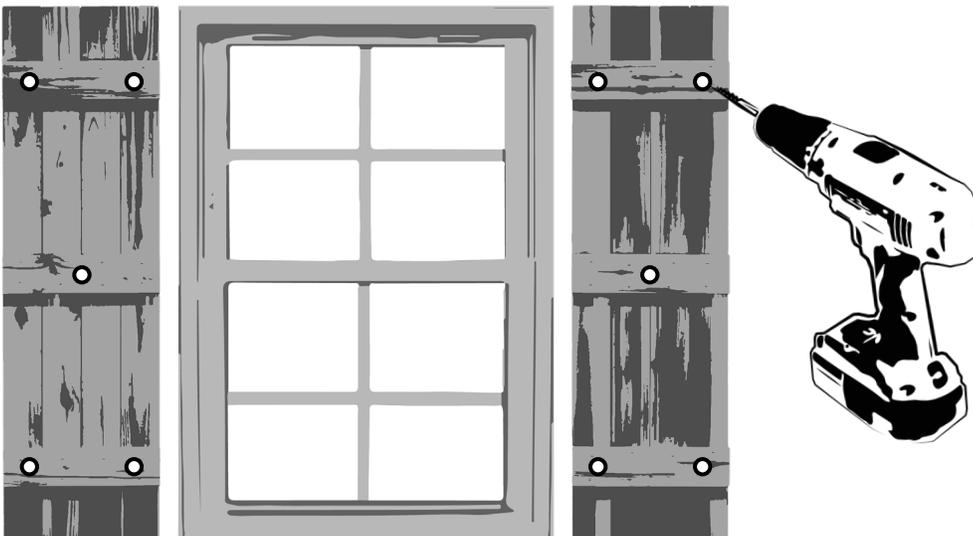

2. Gather required tools:

- Pencil or pen
- Tape measure
- Hammer
- Drill
- Phillips bit
- 1/16" bit and 1/4" bit

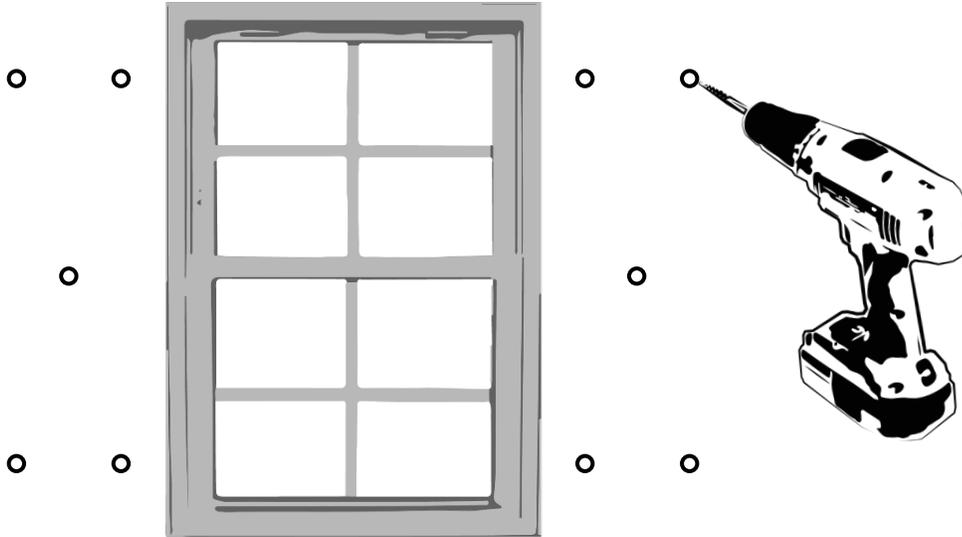

3. **Read all instructions before proceeding.** Then determine location of shutters on wall, spacing as desired.

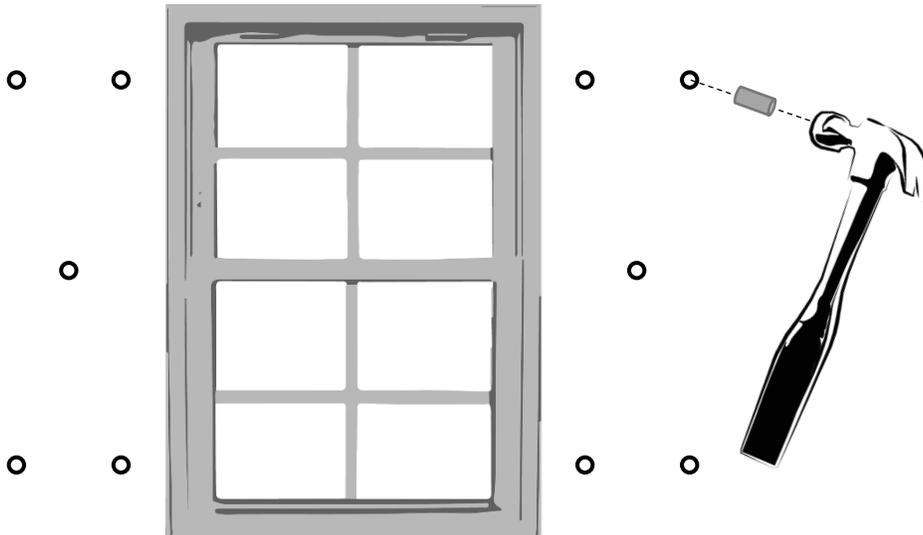

4. Hold one shutter at a time in the desired location, and use **1/16" bit** to pre-drill 5 holes through each shutter AND into the wall. Optimal hole locations may vary depending on your specific project.

5. Set shutters aside for a moment, and use **1/4" bit** to drill into holes in the wall from the previous step. This will widen the holes in the wall sufficiently to accept wall anchors.

6. Use a hammer to lightly tap all 10 wall anchors into holes until flush with the surface of the wall.

7. **Final step:**

Hold shutters so holes align with wall anchors, and use Phillips bit to install fasteners into wall anchors.

Countersinking is recommended if you prefer fasteners to be flush with exterior surface of shutters.
