

Measuring guide for readymade curtains

Measuring for readymade curtains involves taking two measurements of your window.

WIDTH

Measure the width of the track or pole in cm (excluding the finials). Do not measure the window unless the window is the same size as the wall. See chart, for example if your track measures 202cm wide we recommend a purchase of a pair of curtains 229cm wide.

Track or pole size	Approx curtain width
Up to 122cm (48")	117cm (46")
Between 122cm (48") and 195cm (77")	168cm (66")
Between 195cm (77") and 275cm (108")	229cm (90")

HEADING TYPES

There are 2 different types of headers available on our readymade curtains

3" TAPE

Suitable for all track and poles

EYELET

suitable for poles

DROP

You need to decide where you want the curtains to finish; at the window sill, below the window sill (approx 15cm below the sill) or to the floor. Measure from the top of the track or pole to where you want the curtains to finish. Ready made curtains come in 3 drops; 137cm (54"), 182cm (72") and 229cm (90"), some curtains are available in 275cm. (108") You need to order to the nearest next longest drop.

54"
(137cm)

72"
