

Kegco HL-62 Commercial Grade Dual Gauge CO2 Regulator has been specially designed to deliver maximum convenience and durability while dispensing delicious beverages in commercial environments such as bars, tasting rooms, and restaurants. This double gauge draft beer regulator has a Gauge on top that measures CO2 pressure in the keg as well as a gauge on the side that indicates how much CO2 is left in the tank. Tool free pressure adjustment knob allows you to make quick and precise adjustments by hand.

FEATURES:

- Durable commercial-grade draft beer CO2 regulator features a multi-stage body that gives you more precise control when making small adjustments to the output pressure
- **The first stage reduces the output pressure from the tank to a more manageable pressure, and the second stage fine tunes that pressure for output to the keg**
- This allows pressure adjustments to be optimized for the operational range - the large adjustment knob requires less than 360° of rotation for the entire range, affording extreme precision of the output pressure
- **Gauges come equipped with rubber boots that help protect them from damage in the event of a fall**
- Internal safety pressure relief valve that releases when the delivery pressure exceeds set pressure by 15 PSIG, a manual pressure release valve and a shut-off valve to prevent backing up your beer line.
