

How to insert the handle into column --- Additional instruction

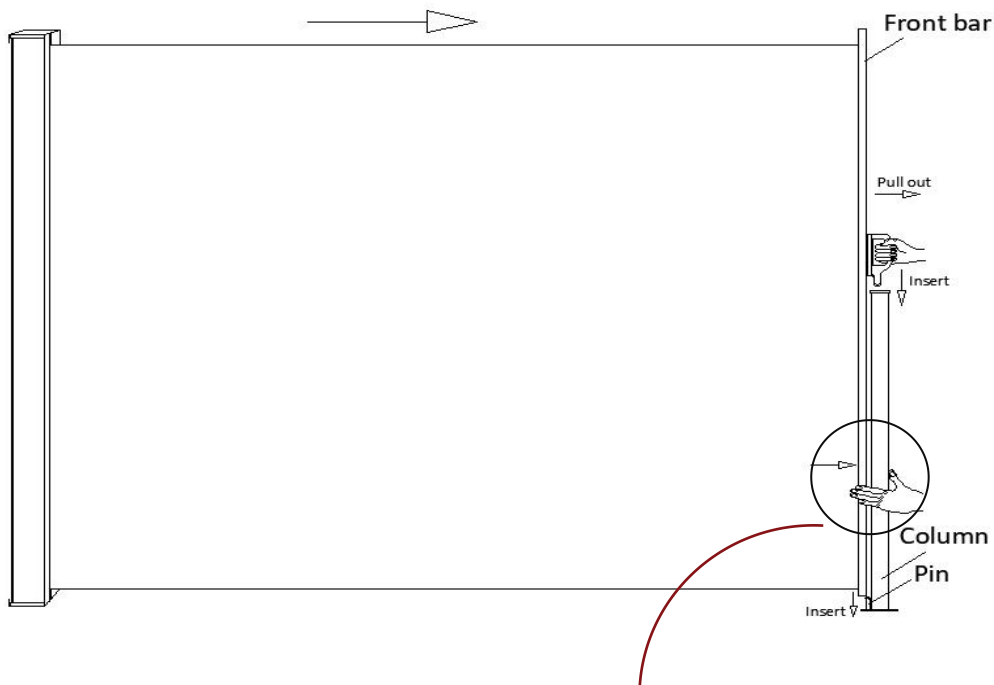

Cause the column is designed in **2° sloped tilt** in order to prevent fabric from sagging, it may be a little bit difficult to insert the bottom of handle into the top of column. Hence we edit this additional instruction to help users learn how to lock the handle easier.

--- Grasp handle with your right hand and pull the fabric out until the handle is close to the top of column.

--- Grasp the front bar with 4 fingers of left hand backward to column and push the column with thumb forward close to front bar. Then insert handle into column approximate 1/2" when column & front bar is close enough.

--- Grasp the front bar with 4 fingers of your left hand according to above figure making it close to the column. Adjust the pulling force of fingers to ensure the hole at bottom of front bar is aligning with the pin on base of column.

--- Insert the handle and front bar down at the same time.
