To avoid the possibility of the appliance plug getting wet, position the aquarium and all electric components in such a way as to allow for a "drip loop" as shown here. A drip loop should be employed for all electrical components used with the aquarium. If the plug becomes wet, do not unplug it. Disconnect the fuse or circuit breaker prior to unplugging.

- 1) Rinse your tank, filter and filter media in cool water. Do not use soap or any sort of cleaning agents.
- 2) Attach light holder to filter. Attach filter to back wall of aquarium. Apply light pressure on filter case to affix suction cups.
- 3) Add gravel or substrate to your aquarium (optional).
- 4) Decorate the aquarium to your liking.
- 5) Add water to the aquarium. Add a water conditioner if you intend on adding fish to your tank immediately. Otherwise, let your tank cycle for a full 24 hours prior to adding fish.
- 6) Attach light to light holder.
- 7) Attach lid clips to sides of aquarium and place lid on top of aquarium. TIP: Notched side of lid should face front of aquarium for easy feeding and lid removal.
- 8) Connect light plug to light power supply. Plug power supply for light and power supply for filter into outlet.
