

ASSEMBLY INSTRUCTION MANUAL - Pet Staircase Assembly Instructions

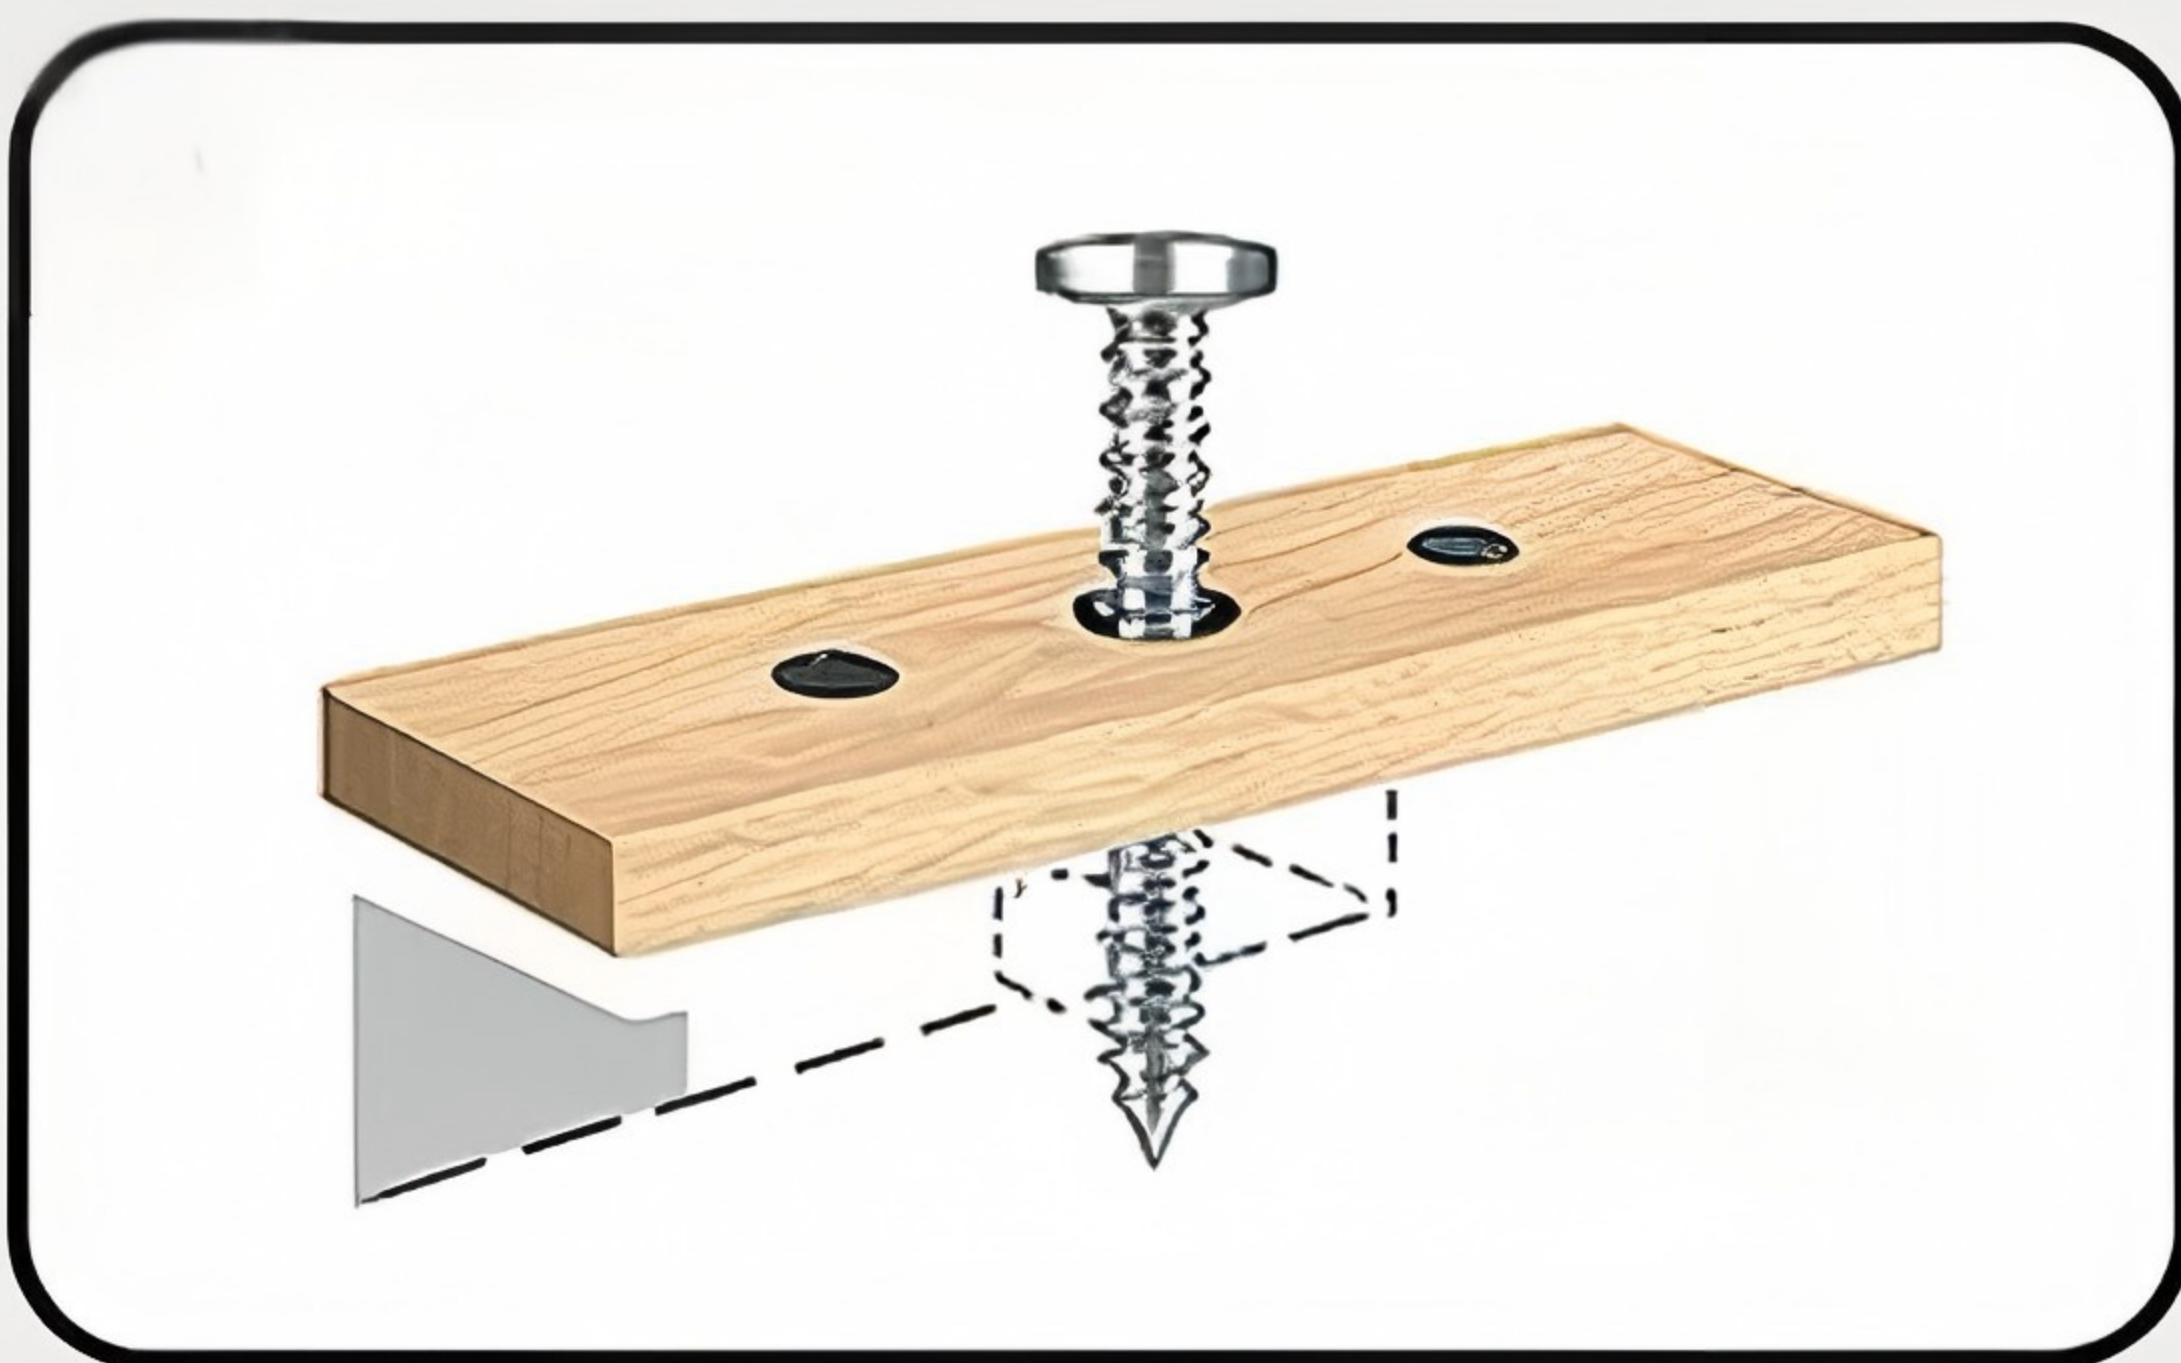

Part list: 2 side panels with claw-print fishbone pattern, pedal with anti-slip pad + corresponding number of side panels, 3 round wooden dowels, several screws (for a three-tier staircase: 3 steps with anti-slip pads + 3 side panels, and so on)

Step 1: Place the wooden board with the anti-slip pad flat in the groove and install the smooth side of the board into the groove.

Step 2: Align the fan-shaped side panel with the slot and insert it. Take one pattern side panel and insert the three steps into their respective slots one by one. Ensure that each step is fully in place to form a preliminary single-sided staircase structure.

Step 3: Take the other panel with the pattern and align it with the already installed steps. Then, use screws and a screwdriver to connect and secure the two panels. Tighten the screws to ensure a firm connection.

Step 3: Place the assembled toy upright to ensure its stability. Then turn it over. Use screws to secure the circular wooden dowels on both sides. Next, install the remaining dowels one by one and tighten the screws to fix them.

Check stability: After installation, gently shake the staircase to confirm there is no loosening.

Safety precautions: Prevent scratches, tighten screws, contact seller for missing parts
