Step 50

Congratulation! You've made to the last step! But don't be too thrilled yet, put on the drawer can be frustrating if you do it wrong. So, take your time and follow the steps below.

1. Please ensure that you have matched the wheels on BOTH sides of the drawer with the wheels on rails installed BEFORE push in the drawer.

2. If the following occurs, redo the last step.

(both wheels are off the rails)

(one wheel is off the rail)

Assembly Instructions

Step 51

When operation for the first time

IMPORTANT: please place the freezer upright for 24 hours because the oil in the compressor needs time to settle to the bottom. If the machine is turned on right away, the oil can leak into the refrigeration system causing issue.

Assembly Instructions

Step 52

The unit is floor standing, but it is recommended that the unit is secured to the wall.

1. Move the unit into desired position.
2. Mark the wall with a suitable scribe the position of the fixing holes.

Warning:

Before drilling, check wall for hidden pipes and cables.

3. Drill holes and insert 2 x wall plug
4. Attach 2 x Wall Straps to the top of the unit using 2 x Washers and 2 x Screws

5. Secure the straps to the wall using 2 x Washers and 2 x Screws

Note: To hide the straps behind the unit, drill the holes lower than the top of the unit

Assembly is complete.

A Guide to Wall Mounting & Fixings

Important note:

If plastic wall plugs (rawl plugs) are supplied with your product, e.g.:

- these are only suitable for use in masonry walls.

If you are in any doubt about the correct wall plugs for your wall, seek professional advice.

Failure of the product due to using the incorrect fixings is the responsibility of the installer.

Important: when drilling into walls always check that there are no hidden wires or pipes etc.

Make sure that the screws and wall plugs being used are suitable for **supporting your unit**. **Consult a qualified tradesperson if you are unsure.**

Hints:

- 1: General rule:  always use a larger screw and wall plug if you are not sure.
- 2: Ensure you use the recommended drill bit to match the wall plug and hole size.
- 3: Ensure you drill the hole horizontally; do not force the drill or enlarge the hole.
- 4: Take extra care when drilling high walls, ceilings and ceramic tiles. Ensure wall plugs are inserted beyond the thickness of the ceramic tiles to avoid the tiles splitting or cracking.
- 5: Ensure wall plugs are well fitted and are a tight fit in the drilled hole.

Types of walls

You can use one of the following types of wall plug if your walls are made of brick, breeze block, concrete, stone or wood.

No.1 "General Purpose" wall plug

Generally aerated blocks should not be used to support heavy loads, use a specialist fitting in this case. For light loads, general purpose wall plugs can be used.

No.3 "Cavity Fixing" wall plug

For use with plasterboard partitions or hollow wooden doors.

No.5 "Hammer Fixing" wall plug

For use with walls stuck with plasterboard. The hammer fixing allows it to be fixed to the wall rather than the plasterboard. Always check the fixing is secure to the retaining wall.

No.2 "Plasterboard" wall plug

For use when attaching light loads onto plasterboard partitions.

No.4 "Cavity Fixing – Heavy Duty" wall plug

For use when fitting or supporting heavy loads such as shelving, wall cabinets and coat racks.

No.6 "Shield Anchor" wall plug – heavy loads

For use with heavier loads such as TV and HiFi speakers and satellite dishes etc.

Care & Maintenance

Safety: always check the fitting and location to ensure your safety in and around the home.

Fitting: from time to time check the fitting to ensure the wall plugs or screws do not become loose.
