ORIENT LUMBER AND TRIM FOR BEST APPEARANCE

Framing lumber is graded for structural strength and not appearance. Exterior trim is graded for one good side.

Always install the material leaving the best edge and best surface visible. Please remember that these blemishes in no way negatively affect the strength or integrity of our product. (See Fig. A, B, C.)

OPTIONAL WOOD FRAME FLOOR LEVELING OPTIONS

There are multiple ways to level your floor frame. Our recommended leveling method is shown below.

Leveling materials are not included in this kit.

PREFERRED METHOD - 4x4 TREATED RUNNERS (Typical for 12' x 12' Kit)

MATERIAL REQUIRED: [TREATED LUMBER]

12' x 12' ☐ x3 4 x 4 x 12' (10,2 x 10,2 x 304,8 cm)

12' x 16' ☐ x3 4 x 4 x 16' (10,2 x 10,2 x 487,7 cm)

12' x 20' ☐ (3) 4 x 4 x 16' (10,2 x 10,2 x 487,7 cm) and:
(1) 4 x 4 x 12' (10,2 x 10,2 x 144 cm) cut to (3) 48" (121,9 cm)

12' x 24' ☐ (3) 4 x 4 x 16' (10,2 x 10,2 x 487,7 cm) and:
(3) 4 x 4 x 8' (10,2 x 10,2 x 243,8 cm)

Fasteners for Frame to 4x4:
(3" Screws shown as one option.)
Minimum 3" screws / exterior grade.

☐ x60 3" (7,6 cm)

☐ x78 3" (7,6 cm)

☐ x96 3" (7,6 cm)

☐ x114 3" (7,6 cm)

! Use only wood treated for ground contact and fasteners approved for use with treated wood.

! Always support frame seams.

LEVELING METHODS

- Level under 4x4 runners only.
- Locate leveling material 12" from ends of runners and no more than 48" apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

LEVELING MATERIALS

- ☐ Gravel
- ☐ Solid Masonry Blocks in 1", 2", 4" or 8" thickness
- ☐ 2x4 Treated Lumber
- ☐ Asphalt Shingles

! Leveling higher than 16" not recommended.

LEVELING & SQUARING THE FLOOR FRAME (Not Included)

STOP!

LEVEL AND SQUARE FLOOR FRAME

STOP!

Before attaching floor decking, it is important to level and square the floor frame. A level and square floor frame is required to correctly construct your shed.

See page 10 for the preferred floor leveling method.

Use a level and ensure the frame is level before applying floor panels.

✓ **BEGIN**

- 1 Check for frame squareness by measuring diagonally across the corners (**diagonal measurement D**). If the measurements are the same, the frame is square. Use the chart below to determine measurement D.

SHED SIZE	D
12' x 12'	203-5/8" (612,3 cm)
12' x 16'	240" (609,6 cm)
12' x 20'	279-7/8" (710,9 cm)
12' x 24'	322" (817,9 cm)

First, secure at ends with one fastener.

- 3" (7,6 cm) screws angled into 4x4.
- (2) at each connection.

NOTE:
12' x 12' floor shown as an example.

4x4 runners are generally installed 12" (30,5 cm) from ends of floor frame and under any seams.

- 2 After the frame is level and square, secure one side of frame to 4x4 runners using one fastener at ends of each runner.

At the opposite end of the frame, secure the frame to 4x4 runners with one fastener at the ends of each runner, ensuring that the frame remains square.

Fasten the frame to the 4x4 runners with (2) 3" screws at each connection (**Fig. A**).

Your floor frame is now level.

! IMPORTANT!

NOTE: 12' x 12' Gambrel shown standard throughout manual

Ensure the floor frame is level after installing floor panels. Re-level if needed.

HINT:

- The floor should be used as a stable work surface for wall construction.
- Organize your assembly procedure during the build process to avoid over-handling of the walls.
