

UNDERMOUNT SINK VANITY

BEFORE YOU BEGIN

We recommend consulting a professional if you are unfamiliar with installing bathroom fixtures and plumbing. Signature Hardware accepts no liability for any damage to the floor, walls, plumbing, vanity cabinet, sink, counter top, or personal injury during installation.

Observe all local plumbing and building codes.

Unpack and inspect the vanity for damage. If any damage is found, contact our Customer Relations team at 1-(408) 728-6543.

GETTING STARTED

- Ensure that you have gathered all the required materials that are needed for the installation.
- Ensure that your bathroom floor is adequately supported, and the finished floor is level.
- Ensure that there is adequate support behind the bathroom wall before installation.

PLANNING

Use the vanity's PDF specification sheet as a reference when planning your layout. The specification sheet can be found and downloaded from the product page on our website.

Because the vanity specification measurements are approximate and slight variations may occur, we highly recommend performing any rough-in procedures with the vanity on site.

TOOLS AND MATERIALS:

*not included

NEVER LIFT THE VANITY TOP FLAT

NEVER CARRY THE VANITY TOP FLAT

UNDERMOUNT SINK VANITY

CABINET INSTALLATION

1. Determine the location where you would like to install your vanity.

2. Locate and mark the location of the studs to which you will fasten your vanity. You can locate studs by using a stud finder.

Important: If the studs in your bathroom do not line up to the mounting location for your vanity, wood blocking can be installed between the studs using standard 2 x 4's. If wood blocking needs to be installed behind the finished wall, we recommend consulting a professional if you are unfamiliar with this type of installation.

3. Place the vanity in the installation location. Verify that the vanity cabinet is level. If the vanity is not level, adjust the feet (if applicable) or use wooden shims to adjust as necessary.

4. Attach the vanity to the wall by screwing through the back of the vanity cabinet. Use the marked stud locations as a guideline. Proceed to Step 2 for attaching your counter top.

UNDERMOUNT SINK VANITY

SINK INSTALLATION

1. Carefully turn the counter top over, resting it on a soft, stable surface to prevent damage.

Important: The counter top is very fragile. Take caution when handling, and have someone assist you.

2. Position the sink over its cutout on the counter top. Make sure the sink is centered with the faucet hole and is evenly spaced between the bolt holes.

3. Use a pencil or marker to draw an outline around the sink perimeter.

4. Remove the sink from the counter top. Apply a bead of silicone sealant around the top edge of the sink rim.

UNDERMOUNT SINK VANITY Y

5. Carefully place the sink upside down on the counter top, positioning it within your marked outline. Once positioned, press firmly into place.

6. At each of the bolt holes in the counter top, attach sink clips by placing the long end of the bracket flat against the sink lip. Screw the wing bolts through the brackets and bolt holes and tighten.

7. Repeat steps 1-6 to attach the second sink to your top.

8. Carefully turn the counter top and sinks over. If needed, reposition the sinks by slightly loosening the wing bolts and adjusting.

UNDERMOUNT SINK VANITY

9. Wipe away any excess sealant with a damp cloth, and allow the sealant to dry. Once the sealant is dry, proceed to Step 3.

YASINU BATHROOM VANITY COUNTER TOP

COUNTER TOP INSTALLATION

1. Apply a bead of silicone sealant around the top edge of the vanity cabinet.

2. With assistance from another person, slowly and carefully set the counter top onto the vanity cabinet. Once positioned, press firmly into place. Wipe away any excess sealant using a damp cloth.

Important: The counter top is very fragile. Take caution when handling, and have someone assist you.

UNDERMOUNT SINK VANITY

3. If you are installing a side-splash and/or back-splash, place a generous amount of silicone sealant on the back of it and press it into place against your bathroom wall. Fill any gaps that are left with silicone sealant. Wipe away any excess sealant with a damp cloth.

4. Let the assembled vanity sit for 24 hours to allow all the silicone sealant to fully dry. Once dry, proceed to the installation of your faucet and drain.

Note: In some situations, it may be necessary to cut the inner cabinet shelves to allow space for your drain's P-traps.

5. For stone tops, such as marble and granite, it is recommended that you apply a high-quality sealer to protect from staining and discoloration. Stone sealer should be reapplied once or twice per year, depending upon usage.
