

Installation Notes

The clock movement belongs to precision electronics product and is only suitable for carbon-zinc batteries. It is recommended not to use high capacity alkaline or rechargeable batteries to avoid reducing lifetime and accuracy of the movement.

Step 1: Select a suitable point and nail the iron nails into the wall to fix the hooks.

Step 2:
Note “-” Electrode and “+” Electrode
Correctly install the 1.5V / AA dry
battery

Step 3: Align the groove above the movement with the hook and hang it on.
