WHY WON'T MY HYDRAULIC BED STAY DOWN?

1. In fact, nine times out ten the reason why hydraulic won't close is because you need to put your mattress on top of the bed. Yep, it really is that easy. This is because the hydraulic pistons need the weight of the mattress to provide enough pressure to close your bed.
2. However, what if you've put your mattress on your bed and you're one of the unlucky ones who finds that their hydraulic bed still won't stay down?

As previously mentioned, they require pressure in order to close. However, occasionally as well as placing the mattress on the bed you will initially have to apply some physical force yourself to close the bed. Don't worry you won't break it! ! !
