## Assembly Steps

Plug the USB cord into the side of the Mirror and Power Source (Output of adaptor needs to be 5V-2A)

- Press the middle touch sensor on the front of the Mirror to Power on the LED Lights (⏻)
- Press the left hand botton (🔊) to select 4 options of brightness. Press and hold after switching on, the LED lights will change brightness gradually.
- Press the right hand botton (Ⓚ) to select 4 options of Color Temperature. Or press and hold to change the Color Temperature gradually.
- Remove and reapply power to reset the Chip if the touch switch is not functioning properly.
