

Assembly instructions

12 inch screw for connecting and fixing motor

12 inch screw,
used to connect the fixed bottom and pedal

11 inch screw,
used to connect the fixed bottom and pedal

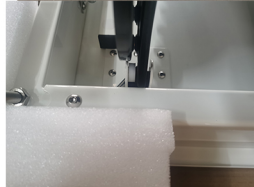

1. Take out the white base plate and lay it flat on the ground

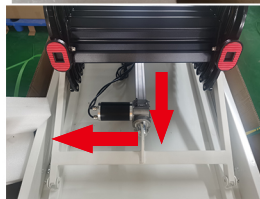

2. Take out the black pedal

3. Find the accessory package in the package and take out two 12-inch screws, two 11-inch screws and the corresponding fixing strip. The bottom plate and the pedal have 12-inch screw holes and 11-inch screw holes respectively. According to the direction of the screw hole, the pedal is placed on the bottom plate

4. After the correct screw is installed, fix it with the fixing strip

5. Take out the motor, install it in the direction shown in the figure, and fix it with 11 inch screws. Connect the power

6. Now that the product has been assembled, install the installed equipment on the stairway of the attic

Note:

This is a complex and professional product.
