8. The warranty shall be void if the product is damaged by unauthorized transport.
9. The warranty shall be void if the product is damaged by unauthorized storage.
10. The warranty shall be void if the product is damaged by unauthorized handling.

■ This product has been inspected strictly in water test before it is sent from the factory. If the display or LED light does not light up after the product is installed on the wall and the water is discharged, there are generally three reasons as follows:

1. The connections of the red and black wires are not properly covered, and the display or LED light does not light up when they touch together or touch the metal plate.
2. The connections of the red and black wires or several other wires are not well arranged, and they are pinched or strained when they are hung on the wall, and the display or LED light does not light up when they touch the metal plate.
3. After connecting the two water inlet pipes to the hot and cold water outlet holes on the wall, when they are hung on the wall, the water inlet pipes are blocked and the water output flow is too small, and the motor does not generate enough power. Then the display or LED light does not light up.
