

PRODUCT CARE AND MAINTENANCE

Product Assembly Instructions

1. Gather your tools: Find your own hammer and check you have the right number of accessories in plastic bag provided with your divan bed base.

2. Remove all the packaging carefully: This includes the staples keeping the drawers or sliding drawers shut and those securing the corner protectors to your divan bed.

3. Turn your Divan bed base upside down: Insert a glider/caster into the socket on each corner and gently tap them into place with your hammer.

4. Push your bed bases together: If your divan base is in two sections or more, push them together, flat end to flat end. If your divan came with **link bars** then unscrew one bolt and slacken the second, on both sides of your divan base-connect the sections with a joining bar and tighten your bolts securely. If your bed came with **U-Clips** - bring the two halves together and where they meet fit the U-Clips on the underside so that they clamp together.

Thank you!

Attaching a Headboard

Divan bases have pre-drilled holes at both ends for the headboard bolts. The locations are marked with stickers. Decide which end you want to fit the headboard and find the precise position of the holes by feeling with your fingertips. Pierce the cloth with a pair of scissors to accommodate the bolts, and use the bolts and plastic washers to clamp the headboard struts to the base. Make sure the headboard is set at the correct height before firmly tightening the bolts.

Aftercare Instructions

1. Unwrap your mattress immediately As soon as you get a new mattress, take it out of any of its packaging and keep it in your home. Another good reason to unwrap your mattress straight away is to get rid of the chemical smell that some give off when new - this should disappear after the mattress has been aired for a few days.

2. Give the mattress some air As well as airing your mattress when it's brand new, you should get into the habit of airing it daily if you want your mattress to last. Throw back your duvet and pillows in the morning (you can leave the mattress cover on) and leave the bed to air for 20 minutes. This will allow body moisture to evaporate out.

3. Turn your mattress regularly Not all mattresses require turning (check with your seller). But if the seller advises it, you should turn your mattress over and rotate end-to-end every week for the first three months, then every three or four months after that. This will help the upholstery fillings to settle down more evenly.

4. Ban bouncing on the mattress To keep your mattress at its best, don't sit on the edge of the bed regularly and don't let the children or pets jump on it. This can put undue strain on the mattress and cause it to lose support sooner.

5. Keep your mattress clean According to The Sleep Council, the average adult sheds around 454g of dead skin over the course of a year, much of which ends up nestled in your bed. Vacuum the mattress and base from time to time to remove this dust. This will not only keep your mattress fresh but also help prevent allergy flare ups that can occur due to microbes and dust mites. Every six months is advisable.
