

This is the installation tutorial for this fish tank

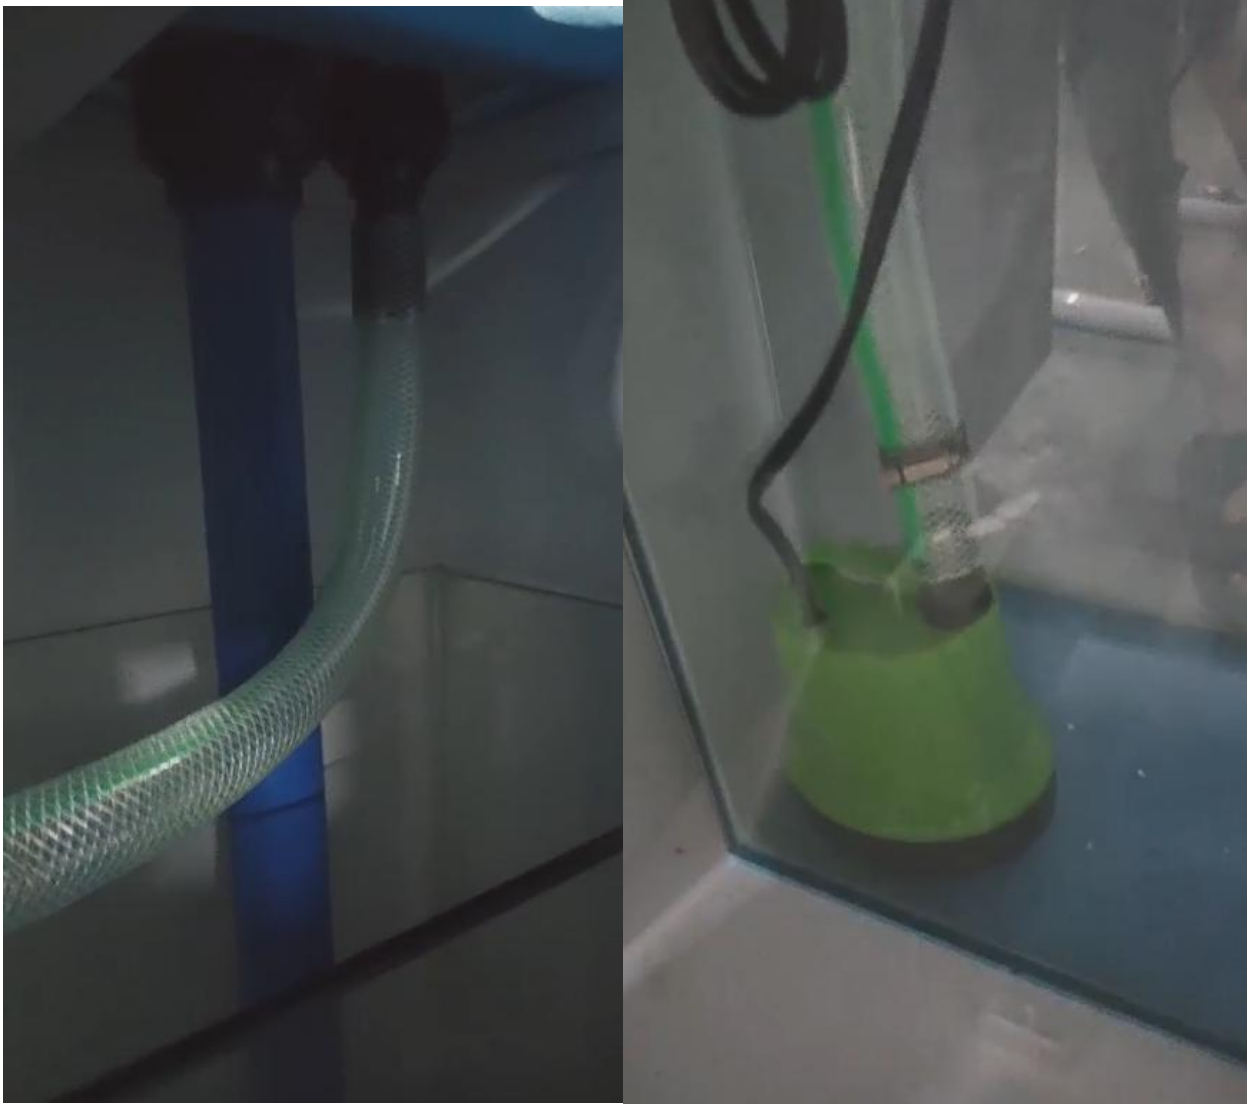

Check if the pipe fittings are complete

Install the aquarium drain pipe fittings first, place the black connector in the aquarium overflow area and tighten it, then install the drain first by tightening the connector, and install the fittings.

Now install the water supply fittings, first tighten the coupling, and then install the blue fittings in the overflow area of the aquarium.

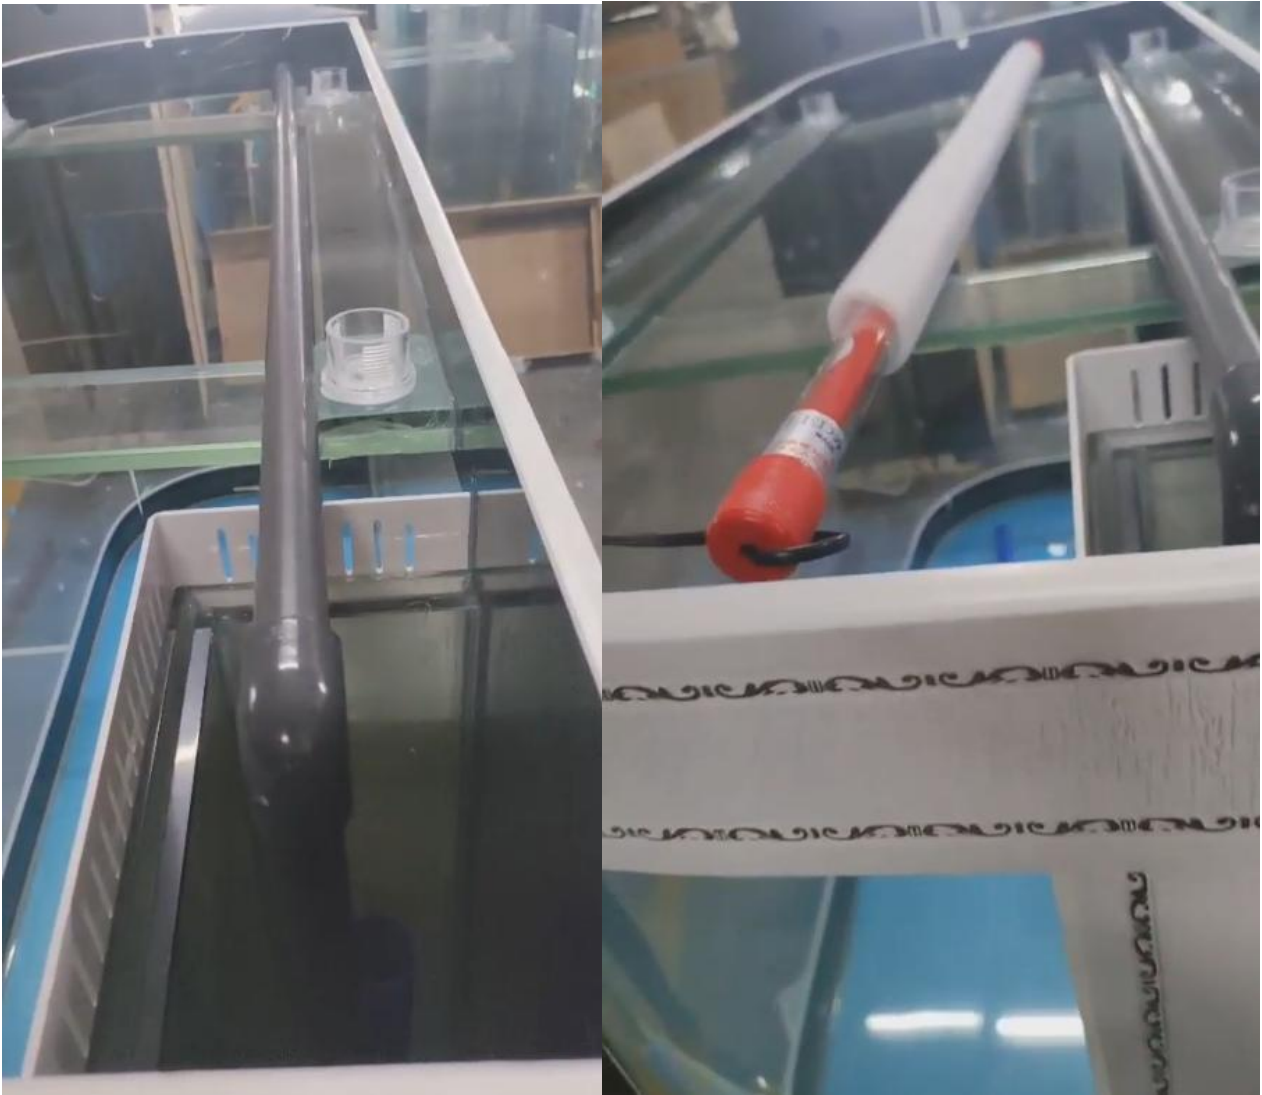

The water pump pipe fittings can be connected and tightened, and the water pump is placed on the other side of the bottom cylinder.

Now install the drainage pipe fittings, first tighten the aquarium strong discharge, and then tighten the drainage outlet

Put the nitrifying bacteria first, and then spread the filter cotton

The outlet is installed above, and then the tube is placed in this position

Four crystal columns are screwed in, and the bar is installed when it is placed on
