Key Features:

- WPC Material:** The stair treads and risers are made from WPC, which is a combination of wood fibers and plastic resins. WPC provides a sturdy and water-resistant flooring material, making it suitable for staircase applications.
- Square Stair Tread:** The stair treads have a square-edged profile, providing a clean and modern appearance to the steps. Square treads offer a straightforward and contemporary design.
- Riser:** The riser is the vertical component between two consecutive stair treads. It forms the "face" of the step and connects the treads, providing structural support to the staircase.
- Aesthetics and Durability:** WPC square stair treads with riser design is chosen for its aesthetics and visual appeal. It adds a touch of elegance to the staircase and enhances the overall look of the space.
- Installation:** WPC square stair treads with risers can be securely attached to the staircase structure using adhesives, nails, or other fastening methods.
- Versatility:** WPC square stair treads with risers can be used in various interior settings, complementing different design styles and décor.

WPC square stair treads with risers are a popular choice in residential and commercial spaces, especially for interior staircases. They are often used in modern and contemporary designs, as well as in spaces where a more classic and refined appearance is desired.
