

Bravura Precision Alignment System (PAS)

Speed for the Professional
Confidence for the Novice.

Square Latch Alignment Posts position the assembly onto the latch for perfect assembly alignment, creating clean lines for vertical and horizontal edged escutcheons

Screw Sleeves nest into each other for perfect alignment.

- No fishing for threads or post to tighten into as the screw threads are completely aligned for assembly.
- Significant increase in speed of assembly while preventing cross-threading or stripping screws from bad alignment.

Bravura Precision Alignment System is unique to the industry as it is built into the lock itself. No loose parts to be forgotten, no slop in the components and its solid brass casting is part of the lock. Designed with precision and fast assembly in mind. Once the latch and spindle are installed:

- Place the Interior Assembly into the door - Spindle into the Assembly and Alignment Posts above and below the latch.
- Slide Exterior Assembly onto spindle and nest Screw Sleeves into each other.
- Place Interior screws into the pre-aligned holes and tighten.
- Fast - Precise - Confident and Complete.
