- Manual-ON/Auto-OFF: Allows you to turn lights on when you enter a room and automatically turns them off when you leave. (Vacancy Sensor)
- Manual-ON/Timed-OFF: Allows you to turn lights on when you enter a room and select a time for lights to turn off (options include 10, 20, 30, and 60 minutes). (Timer)

The SensaDimmer turns lights on when you enter a room and off when you leave, but can be adjusted to become Manual-ON/Auto-OFF if desired.

Coverage Area
The Occupancy Sensor, Vacancy Sensor, and SensaDimmer each have a maximum coverage range of 180 degrees and a coverage area of 600 sq. ft. The sensor must have a clear and unobstructed view of the coverage area. Objects blocking the sensor's lens may prevent detection thereby causing the light to turn off even though someone is in the area. Windows, glass doors, and other transparent barriers will obstruct the sensor's view and prevent detection.

All night lights include ambient light level sensors. Each features a range of settings, including: Always Off, Low, Medium and High. If set to Low, Medium or High, the night light's LED will only be visible when the ambient room is dark. The adorne Frame System

The frame is the foundation upon which the adorne modular system is built. It is manufactured with high-strength galvanized metal and includes a ground wire.

Frames include plastic spacers. The spacers remain in place for devices with full size back bodies. They must be removed for devices with plus size back bodies, such as dimmers and GFCI outlets.

The frame completes the enclosure, providing a safe installation during the construction phase and allowing the wall plate to be installed at the end of the project.

Each frame includes a leaded ground that supports the full adorne system. Most switches, outlets and wall plates (including cast metals) are automatically grounded to the frame, saving time and ensuring a safe and reliable ground path.
