

Operation Manual:

1. Load 3*AA battery or connect the power with USB wire.(Choose one way only,discharge the battery if you use USB wire)
2. Put clear water inside the tank.(95% full is enough)
3. Turn on switch on the base of the lamp.
4. Add 3 drops of detergent into water and wait for about 1minute to release the bubble from the tank.
5. Dip the 2 jellyfish into water then they will float up and down.(if there are some bubble under the head of jellyfish,use a stick to turn it over to release the bubble, or the jellyfish will keep floating on top)

Note:

Do not keep the lamp working more than 8 hours each day to save the life of motor.

Change the water after about 2 weeks because the water may gone dirty.
