

4 Drawer Desk With Optional Hutch

Congratulations on the purchase of your Desk. This desk has been crafted to the highest standards of quality and safety and will give you many years of enjoyment and practical use.

Since this desk is a natural wood product, there will be variations in color and grain, and minor wood grain checking may occur. This is normal and does not compromise the integrity of your dresser. Variation in the character of this piece is integral to its beauty and distinguishes it from lower quality composite materials.

Assembly is quite simple and requires only a flat head or Phillips head screwdriver. The use of a power drill with the clutch set to low and a Phillips head attachment is helpful but not necessary. Assembly will be most easily accomplished if you take the time to carefully sort the hardware and familiarize yourself with the function of each piece.

Thank you and Enjoy

WARNING

Furniture tipping over can create a significant hazard in the home, particularly to young children, although adults can be injured as well. It is necessary that case goods over 30" in height be secured with some form of anti-tip over device. This desk and hutch come with anti-tip over straps that reduce the risk of tipping. These can be easily installed in minutes and must be used, especially where children are concerned and where earthquakes may pose a hazard. **Please note:** These straps will reduce the risk of dresser tip-over, they will not eliminate that risk.

Anti Tip Over Straps Installation Guide

Please note: These straps will reduce the risk of desk hutch tip-over, they will not eliminate that risk.

Anti Tip Over Straps Pack

4x **Strap Brackets**

2x **Straps**

4x 40mm **Screws**

4x 25mm **Screws**

- 1** Use the four 25mm screws to attach two plastic strap brackets to the hutch into the pre-drilled holes on the upper back of the hutch.

- 2** Use the four 40mm screws to attach two plastic strap brackets vertically to the wall at a height corresponding with the height of the plastic brackets on the hutch.

Typical wall stud spacing is 16" from stud center to center.

!!! Bracket screws should only be installed into wall studs or similar substrate!!!

- 3** Slide the plastic straps through both wall brackets. The plastic straps should be arranged so that the bumpy side is facing away from the wall and the receiving heads are up.

Then move your hutch near the wall brackets and slide the bottom of the straps in the wall brackets up through the brackets on the hutch.

- 4** Secure the hutch by pulling each strap back through itself into the head of the strap until the bumpy portion engages the head.

Test the latching action of the strap by tugging on it to verify that it is "locked" in place.

To release the strap, simply push on the lever and pull the strap off.
