

## Unrolling guide: For Floortex **PVC** Chair Mats

In order to offer the best possible value, we roll these PVC Vinyl mats to save you money on freight and to make them easier to handle on delivery. Floortex Phthalate Free PVC products offer excellent performance, but like all vinyl products the mat will need a little care to return it to its flat working state:

- 1 • Remove your mat from its carton & allow it to warm thoroughly to at least room temperature before unrolling.

- 2 • Once thoroughly warmed through, unroll the mat onto a totally flat and even floor. We recommend using two people to do this.
  - Ensure the textured surface of the mat is facing upwards:
  - for Hard Floor application mats the smooth side should face down.
  - for Carpet application mats the grippers should face down.

- 3 • Place flat weighted items such as books on to the corners of the mat and also in the center.
  - Your mat will gradually regain and retain it's flat state, this could take up to 72 hours depending on the environmental conditions.
