1, Under TSCA EPA is now required to evaluate existing chemicals to determine whether they "present an unreasonable risk of injury to health or the environment." The Agency will start the risk evaluation process for these first 10 chemicals and within six months release a scoping document for each chemical which includes the hazard(s), exposure(s), conditions of use, and the potentially exposed or susceptible subpopulation(s) the Agency plans to consider for the evaluation.

9	Trichloroethylene (TCE)	79-01-6
10	Tetrachloroethylene (Perchloroethylene)	127-18-4

2, On December 20, 2019, EPA finalized the designation of 20 chemical substances as a high-priority for risk evaluation under TSCA. This was the final step of the prioritization process initiated on March 20, 2019. These chemicals will move through the process required by TSCA to evaluate any unreasonable risks they may present to human health or the environment.

As required under the Toxic Substances Control Act (TSCA), as amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act, EPA issued five final rules in December 2020 to reduce exposures to certain chemicals that are persistent, bioaccumulative and toxic (PBT). These chemicals build up in the environment over time and can therefore have potential risks for exposed populations, including the general population, consumers and commercial users, and susceptible subpopulations (such as workers, subsistence fishers, tribes and children).
