

# DESSERT CANDLE CARE

## LIGHTING FOR THE FIRST TIME

Light the candle and let burn for 2 min. Extinguish the flame and let the wax solidify.

Repeat this again but let it burn for 5 minutes. Extinguish the flame and let the wax solidify.

Repeat this procedure once more but let it burn for 10-15 minutes. Extinguish the flame and let the wax solidify.

You now should have a flat area approximately 2" diameter formed around each wick and your candle is ready to be burned like a normal candle.

## NORMAL CANDLE CARE

Trim the candle wick to 1/4" before lighting each time.

Never burn your dessert candle more than 2 - 3 hours.

Reference the safety sticker on the bottom of your candle for more safety instructions.
