

Thank you for your purchase of our Beam Fireplace Mantel Shelf.

How to install corbels if included.

The corbels come predrilled with screws.

Turn the beam upside down on a soft surface. The bottom of the shelf is flat. The top of the shelf has the French cleat mounting bracket.

Line up the corbels with the holes in the bottom of the beam. Insert the screws through the bottom of the beam and use a small Philips screwdriver to tighten the screw.

Installation using French Cleat Mounting Bracket (included).

Please contact local hardware store or a professional for recommendation of screws (not included) needed for your application (i.e. drywall, brick, or tile).

Follow instructions on the mounting bracket for orientation of the bracket. Locate studs on the wall and mark the measurements on the wall and the bracket. Pre-drill the holes into the bracket and then screw into the studs.

The beam will sit flush on this mounting bracket.
