

About our products:

The heavy duty floor mats are manufactured using recycled polyester and rubber. To clean, use dry vacuum on the surface of the mat. The mat can be hosed off to remove heavy soil. A high-pressure hose may be used (not to exceed 500 PSI) and hot water not to exceed 120F to rid the mat of oils. Lay on flat surface to dry.

Do not use steam, bleach, degreasers containing butyl, or caustic chemicals. Do not machine wash or mechanically scrub the mats. Not following the care instructions will void the product warranty and shorten the lifespan of the product.

Rubber backed mats must never be stored in an up-right position; this will cause the edges to curl, creating an unsafe area and will void the warranty.
