

4 ft. wide x 8 ft. long x 14 in. high Raised Garden Bed

Parts List:

- (28) 4 ft. Boards
- (12) Corner Posts
- (6) Caps
- (6) Screws

To assemble the garden bed, build the frame on a level surface. It is recommended to build the garden bed where you plan on keeping it as it is difficult to move once assembled.

Each side of the garden bed will be four boards tall. Slide the boards into the corner posts evenly and one at a time. If needed gently use a rubber mallet to tap the boards into place.

Attach the decorative caps to the corner posts with a screwdriver when the frame done. It is recommended to drill a pilot hole into the caps first.

The garden bed will hold about 19 cubic feet of soil.
