How to instal Components

*Minifix is the main connection component used in Minima products. Before starting, please check the below figures

MINIFIX
HEAD

MINIFIX
SCREW

DOWEL

If the dowel is not required during the installation phase, it is not included in the package.

*Please notice that there is an small arrow on A03 (minifix head). This arrow should show the direction of upper hole.

*After attaching two pieces please turn the A03 (minifix head) clockwise direction with the help of a screwdriver.

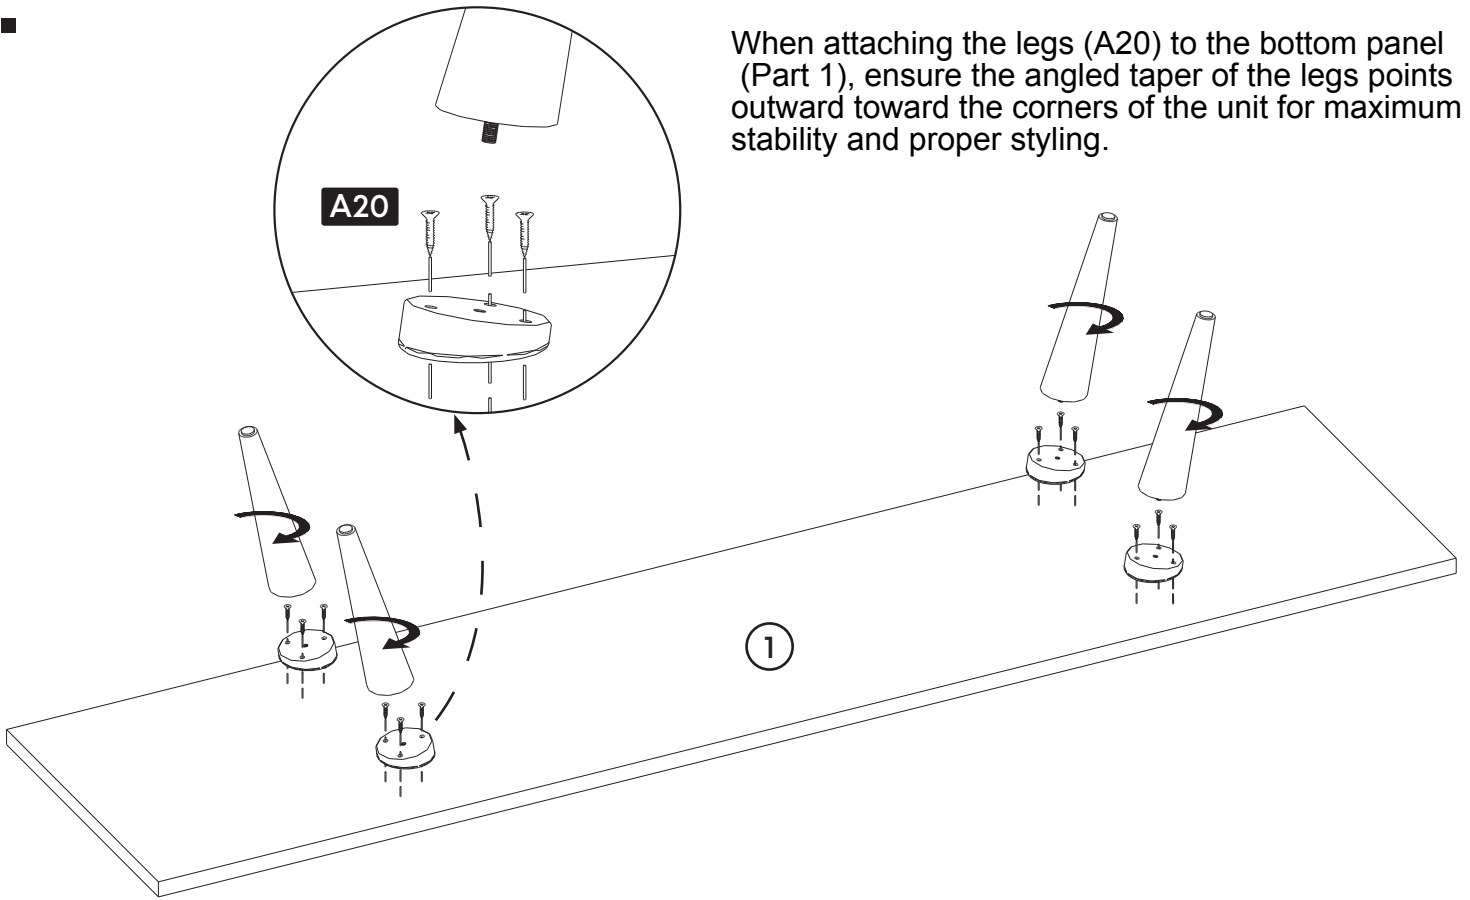

*Please do not over screw the minifix head since it may be broken if too much power is imposed. Just make sure that it is screwed to the direction "+" do not go any further.

Note for Minifix Installation: Ensure the small arrow on the Minifix head (A03) points directly toward the edge hole where the Minifix screw (A02) enters. Once inserted, turn the head clockwise until it stops (usually a half-turn)—do not over-tighten, as forcing it past the "+" position can break the fitting.

1.

When attaching the legs (A20) to the bottom panel (Part 1), ensure the angled taper of the legs points outward toward the corners of the unit for maximum stability and proper styling.

Settings of Hinge

Use the adjustment screws on the hinge bodies to align the door (Part 12) left-to-right and up-and-down. Adjust them until the door sits perfectly level and provides a clean, full overlay directly over the cabinet frame, eliminating any uneven gaps.

10.

When installing the piston (A16), have a second person hold the drop-down door (Part 11) perfectly level at a 90-degree angle. Securing the piston while the door is fully supported prevents the hinges from over-extending and damaging the wood.
