

The device mainly consists of the following parts, with the list provided as follows:

Desktop

Table legs

Side cabinet

Support plate

Screws

The specific installation steps are as follows:

Step 1: Install the table legs

Take out the table legs and self-tapping screws. Align the self-tapping screws with the installation areas on the table legs and the back of the desktop. Tighten the screws to ensure they are securely fastened without any looseness.

Step 2: Install the support plate and side cabinet

1. Align the support plate with the installation area on the back of the desktop and secure it with screws from the bottom sides of the support plate.

2. Place the desktop with the installed support plate on top of the side cabinet.

3. Open the topmost drawer of the side cabinet, pull out the drawer slides, and press the detachable buttons on both sides of the slides to remove the drawer.

4. Adjust the position of the support plate to align it with the side cabinet. Then, tighten and secure it with screws from the drawer installation area (bottom).

Step 3: Install the built-in power strip on the desktop

Align the power strip with the installation slot on the top of the desktop. Thread the power cord of the power strip through the corresponding cable holes on the top and bottom of the desktop. Adjust the position of the power strip so that it is flush with the surface of the desktop.

Finally, the installation is complete.
