

Energex Maximum Performance Seating by *Southern Motion*

Energex Maximum Performance Seating is a 2.0 Density Foam Core topped with 2.5 Density Energex Maximum Performance Topper that provides revolutionary technology that will change the Motion Furniture category. The unique combination of superior, conventional and specialty foam products is what makes this product so unique and will become the new standard of premier Motion Furniture seating comfort.

Features and Benefits:

Open Cell Design - Allows for rapid dissipation of body heat

Thermal Performance Cooling –Greatly improves temperature control

Strut Reinforcing Technology (SRT)– Polymer form cell membranes reinforce the cell superstructure for extreme durability

Facts:

Energex has the pressure relief of memory foam but the bounce of latex.

Energex is a unique, highly-adaptive, temperature-responsive foam designed to adjust rapidly to individual comfort needs.

Energex is suitable for a diverse array of products; from soft bedding to high end performance seating.

Energex shows almost a 500% increase in resiliency when the foam is heated to body temperature compared to Conventional Visco, HR and latex foams.
