STEP BY STEP INSTRUCTIONS

Before starting your installation disconnect the power by turning off the Circuit Breaker or by removing the fuse at the fuse box. Just turning the light off at the light switch is not sufficient to prevent electrical shock.

1

ATTACH MOUNTING BRACKET AND MAKE WIRE CONNECTION

If there is an existing fixture remove it. Expose the supply wires from the j-box. Mount the supplied mounting bracket to the J-Box.

2

CONNECT THE WIRES

Gently pull the supply wires through the center of the mounting bracket. Connect the black fixture wire to the black supply wire and the white fixture wire to the white supply wire. Connect the fixture ground wire to the ground wire from the J-Box. Secure all connections with the supplied wire connectors and U.L. listed electrical tape (not supplied). Tuck all wires carefully into the J-Box.

3

MOUNT THE FIXTURE

Place the fixture canopy over the back plate, such that the fixture is flush against the wall. Secure with the supplied short screws.

4

RESTORE THE ELECTRICITY AND CHECK THE OPERATION
