

WHY IS MY BULB FLICKERING?

BULB FLICKER: Some customers experience flickering when they insert a bulb into a lamp and they assume it is a switch issue or an electrical problem or a problem with the lighting fixture.

Please note that all NOVA of California products are UL or ETL certified and have been thoroughly tested 3 times for safety, functionality and packaging. This product is designed to last for 50+ years and you can find many NOVA vintage products in secondary markets selling for high prices that have been in use for 70+ years.

Please confirm that your NOVA product is plugged into a surge protected 110/120V outlet, maximum wattage restrictions are followed with regard to bulb use and no undue tension was applied to the cord or connectors and no heavy furniture was placed on the switch or cord.

Please also confirm that you have purchased a quality, dimmable LED bulb that complies with the maximum wattage noted.

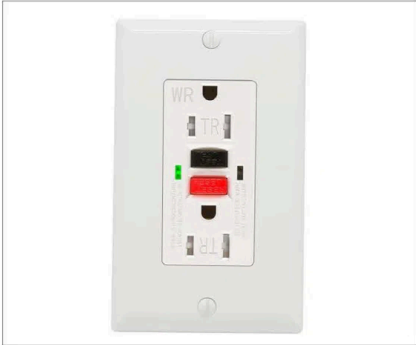

The LED bulb market is the wild west and there is so much variation and so many poor quality options that buzz and flicker. In the past, you could buy an incandescent bulb and they were dimmable. With LED bulbs, you'll need to buy a dimmable LED bulb and you'll need to buy a quality product. Sadly, there is very little regulation in the LED bulb market, as there used to be in the incandescent bulb market. Many small shops make low quality LED bulbs at a low cost and you'll get what you pay for.

We recommend buying high quality bulbs that are dimmable and "FLICKER-FREE" like this one from Emery Allen. Buying quality LED bulbs should eliminate problems with bulbs flashing, buzzing or flashing.

Once you have confirmed that the switch cover is engaging and the switch is working fine, the plug is connected properly into a suitable power source and you are using quality dimmable LED bulbs, you should be able to enjoy your purchase.

If you experience an electrical problem, please remove the plug from the outlet and consult an electrician for optimum safety.

Surge Protected 110/120V Wall Outlet

Cord is Intact

High Quality Dimmable LED Bulb

Switch Cover is Secured to Switch
