

INSTRUCTION

1. Snap a chalk line around the perimeter of the pool, 24" from pool edge.
2. Decide where the opening of your pool fence will be. Mark on the pool deck with chalk for placement of initial pole.
3. Drill hole around the entire pool with drilling guide. All holes should be drilled to a depth of 4", and at a direct 90° angle to the deck.
4. When you come to a corner of the pool, we recommend that you not design 90° Corners within one fence section. Always use two smaller sections to meet at the corner. Drill the two corner holes at a 5° angle away from each other (use a square and level to measure the angles before drilling, or use drilling guide).

5. To cut down a fence section to create a smaller one, follow the following step:

A. IMPORTANT: Lay out mesh on flat surface, ensuring that mesh is tight and straight in all directions.

B. Decide the width of the fence. Add four inches to your measurement prior to cutting.

C. Using scissors or utility knife, cut mesh of fence to determined width.

D. Using any extra pole, detach trim with 1/4" Philips head bit

E. Mark desired length on mesh with a chalk line. Fold extra fabric back and under, leaving fabric 1/2" longer than marked chalk line. Reattach trim to pole along marked line, ensuring that the fabric is sandwiched in between the pole and the trim, and that the screws are directly on the chalk line. Trim away excess fabric from pole edge with scissor or utility knife. Use a heat source to melt the cut edge of the mesh to prevent fraying.

6. When you have completed all the holes, clear the holes of any drilling dust. Insert the plastic "feet" into the holes. Always insert the feet with care, so as not to damage them. Confirm that plastic feet fit snugly into the holes. If you are having trouble getting the feet to fit into the holes, tap them gently into place with a hammering, so as not to break them. Complete this step for all the plastic feet.

7. Attach safety latch to end of each fence section, using the pre-drilled holes in the pole.

Insert your fence into the plastic feet. Fasten each section to the next with the "safety latch".
