

# Installation Instructions

The installation of ceiling fan lights has certain requirements for the ceiling of the installation location:

1. The ceiling for installing ceiling fan lights is recommended to be a flat ceiling. If there is a circular and square ceiling design with a concave surface, please use the ceiling surface to calculate the installation height. It is recommended that you take a photo and send it to the online customer service for consultation, so as not to cause no wind in the ceiling fan after installation.
2. Our ceiling fan lights can generally be installed on the slope, but the inclination angle cannot be greater than 30 degrees, otherwise you need to customize the hook to adjust the installation angle!

As shown below:
