

Signature Crest Scalloped Style

Precision-shaped fabric. Showroom-worthy custom valances.

Turn beautiful fabric into a custom-fitted architectural valance shaped for your window. The Signature Crest Scalloped TraceShaper™ reimagines the traditional scalloped valance with a cleaner, more refined profile — giving you soft curved detail without the heavy, old-fashioned look of classic scallops. Create repeated crest sections, open straight spans, or shaped side sections, then adjust the layout to balance the window, center the fabric motif, and create a polished designer look made for your room.

Adjust the Crest Sections

Make the scalloped crest sections wider or narrower to suit the window, fabric, or focal motif.

Control the Straight Span

Adjust the space between scallops, or create a straight center span with shaped side sections for a cleaner custom look.

Balance the Side Sections

Widen or narrow the side sections to frame the window and position the fabric motifs.

Repeated Crest Styles

Fresh scalloped rhythm with a designer finish.

Repeat the scalloped crest sections across the window for a graceful, balanced look. This layout gives the valance a shaped architectural rhythm while keeping the overall profile clean, refined, and custom-fitted.

Use paisleys, florals, medallions, solids, textures, or statement prints to change the mood of the design. The repeated crest sections help create movement across the window while giving the fabric a polished, designer-planned presentation.

Open Span & Side Crest Styles

A tailored scalloped layout with open space.

Use a straight center span with shaped crest side sections, or adjust the space between scalloped sections to create a custom layout for your window. This design keeps the signature scalloped detail while giving the fabric room to breathe.

The open span works beautifully with solids, large-scale prints, geometrics, florals, and textured fabrics. Adjust the layout to balance the window, position the motif, and create a fresh custom-fitted valance with architectural shape and soft fabric detail.
