

Pole Installation Instructions

This Page also to be used for these Models

Straight Poles 	UBHWD-PS4	UBHWD-PS6	UBHWD-PS8
Curved Poles 	UBHWD-CPS4	UBHWD-CPS6	UBHWD-CPS8

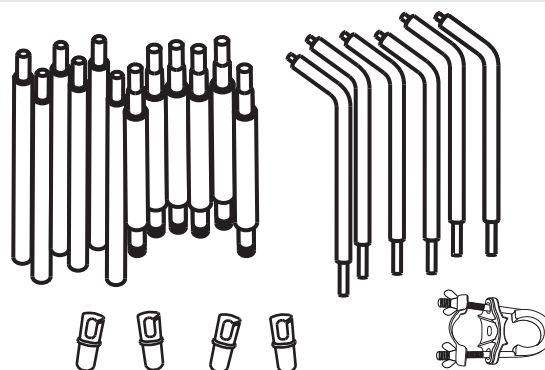

Warning :

2 adults in good physical condition are required for the following assembly. Wear proper shoes and maintain balance to prevent a fall. Failure to follow all instructions and warnings may result in serious injury.

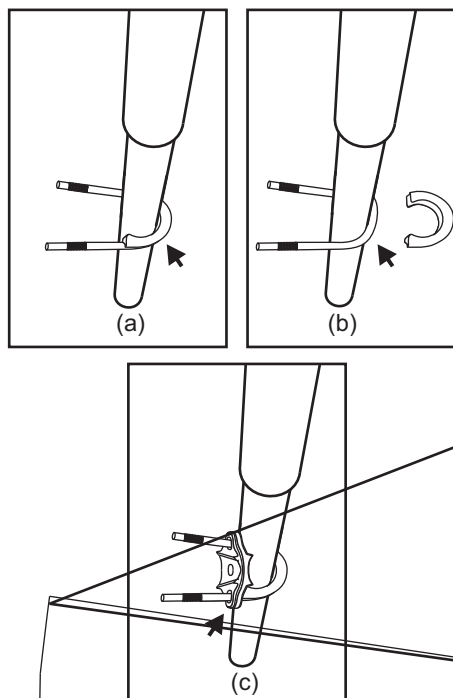

1. First, place all parts to be used in the process of installation in front of you.

For straight poles - For the lower poles use the ones that are tapered.

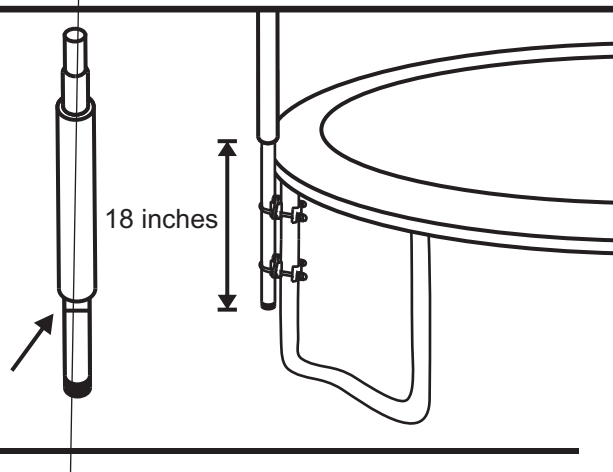

For curved poles - Use the curved pole as the upper pole.

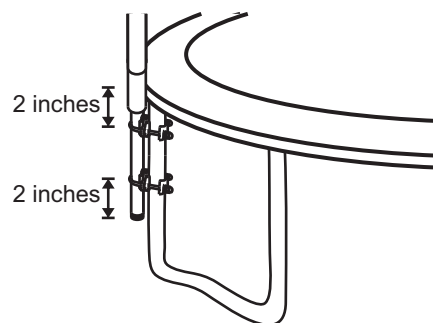

2. Take the clamp and clasp the lower enclosure pole into the rounded end of the clamp. Make sure that the black rubber cap of the lower pole faces down.
 - a) If the pole fits too loosely, insert the green rounded piece before clamping the pole so clamp will tightly clasp the pole.
 - b) If the pole is too thick and does not fit into the hole, remove the green rounded piece to create more space for the pole. You should then be able to clasp the trampoline pole into the clamp.
 - c) Once the pole is securely inserted into the clamp, you should now insert the plastic bracket until you reach the pole.

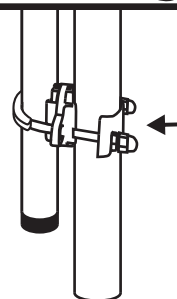

3. Be aware that the mark on the lower pole needs to align with the trampoline frame. If there is no line on the pole then please have it attached 18" below the frame.

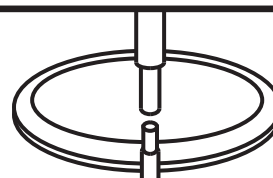

4. The set comes with 2 clamps per pole. One being attached 2" **below frame**, while the other being attached 2" **above the end of the lower pole**.

5. Insert the plastic bracket, then clasp the trampoline leg into the clamp. Secure tightly with steel brackets and nuts.

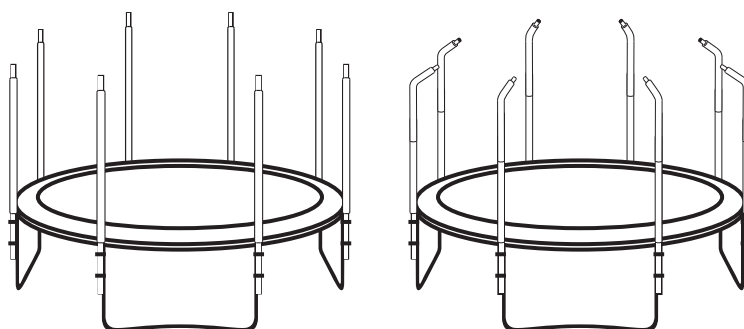

6. Now you can have the upper part of the pole inserted into the lower part that is already attached to the leg.

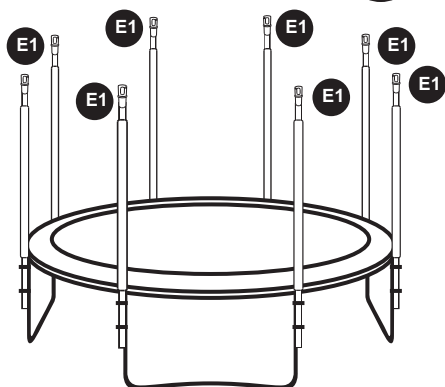

7. Repeat the steps above to have all your enclosure poles connected securely to your trampoline legs.

Cover all the poles with the PVC Sleeve (Item T).

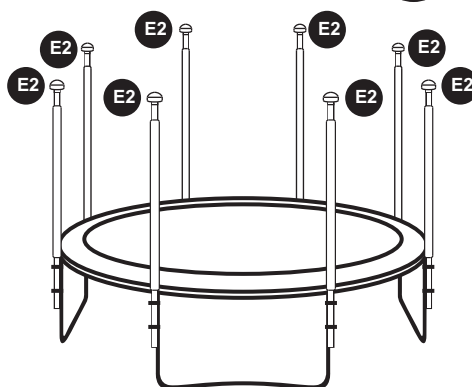

8. After connecting all enclosure poles insert the pole caps, if you have an inside type net use part number E1 and for outside type Net use E2. If you are using the curved poles, use the pole caps provided.

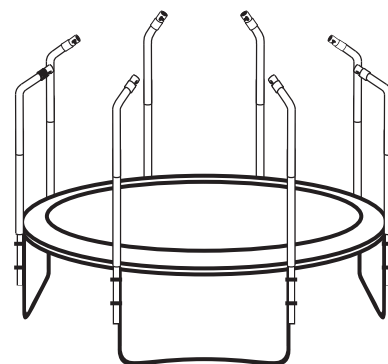

For inside type net E-1

For outside type net E-2

For curved poles

After you installed the poles you should install the enclosure net. For instructions how to install the enclosure net see next page for the inside type model and the outside type. Choose the one applies to your purchase.
