- 1 11/32" Shower Valve Socket Wrench

Single Handle Kitchen Faucet With Pull Down Spray

Model NO: UF13200

UF13203

UF13205

Maintenance:

Your new kitchen faucet is designed for years of trouble-free performance.

Keep it looking new by cleaning it periodically with a soft cloth. Avoid abrasive cleaners, steel wool and harsh chemicals as these will dull the finish and void your warranty.

Preparation / Assembly

Shut off water supplies. Remove old faucet. Clean sink surface in preparation for new faucet.

If desired, place optional Escutcheon and Base Plate on bottom of new faucet before positioning faucet through mounting hole.

Remove the 2 screws from locking nut. From under the sink, install the rubber washer, steel washer, and locking nut onto the shank. Tighten the locking nut with a basin wrench or socket tool and re-install the 2 screws to secure the faucet in place.

Apply pipe tape onto threads of water supplies. Use wrench when tightening the hose connection, do not overtighten.

Important: After installation is completed. Turn on water supply and allow both hot and cold water to run for at least one minute each. While water is running, check for leaks. Re-install Spray head. Your new faucet is now ready to use.
