Possible problems during installation:

• There is a gap between the 2 boards.

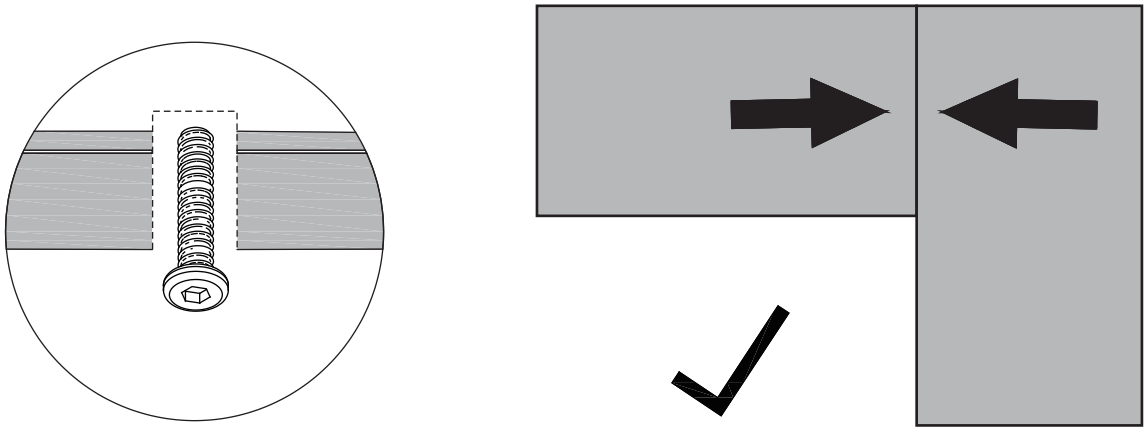

• The hole in the bar is not aligned with the hole in the board, and the screw can notbe installed.

Recommended solution:

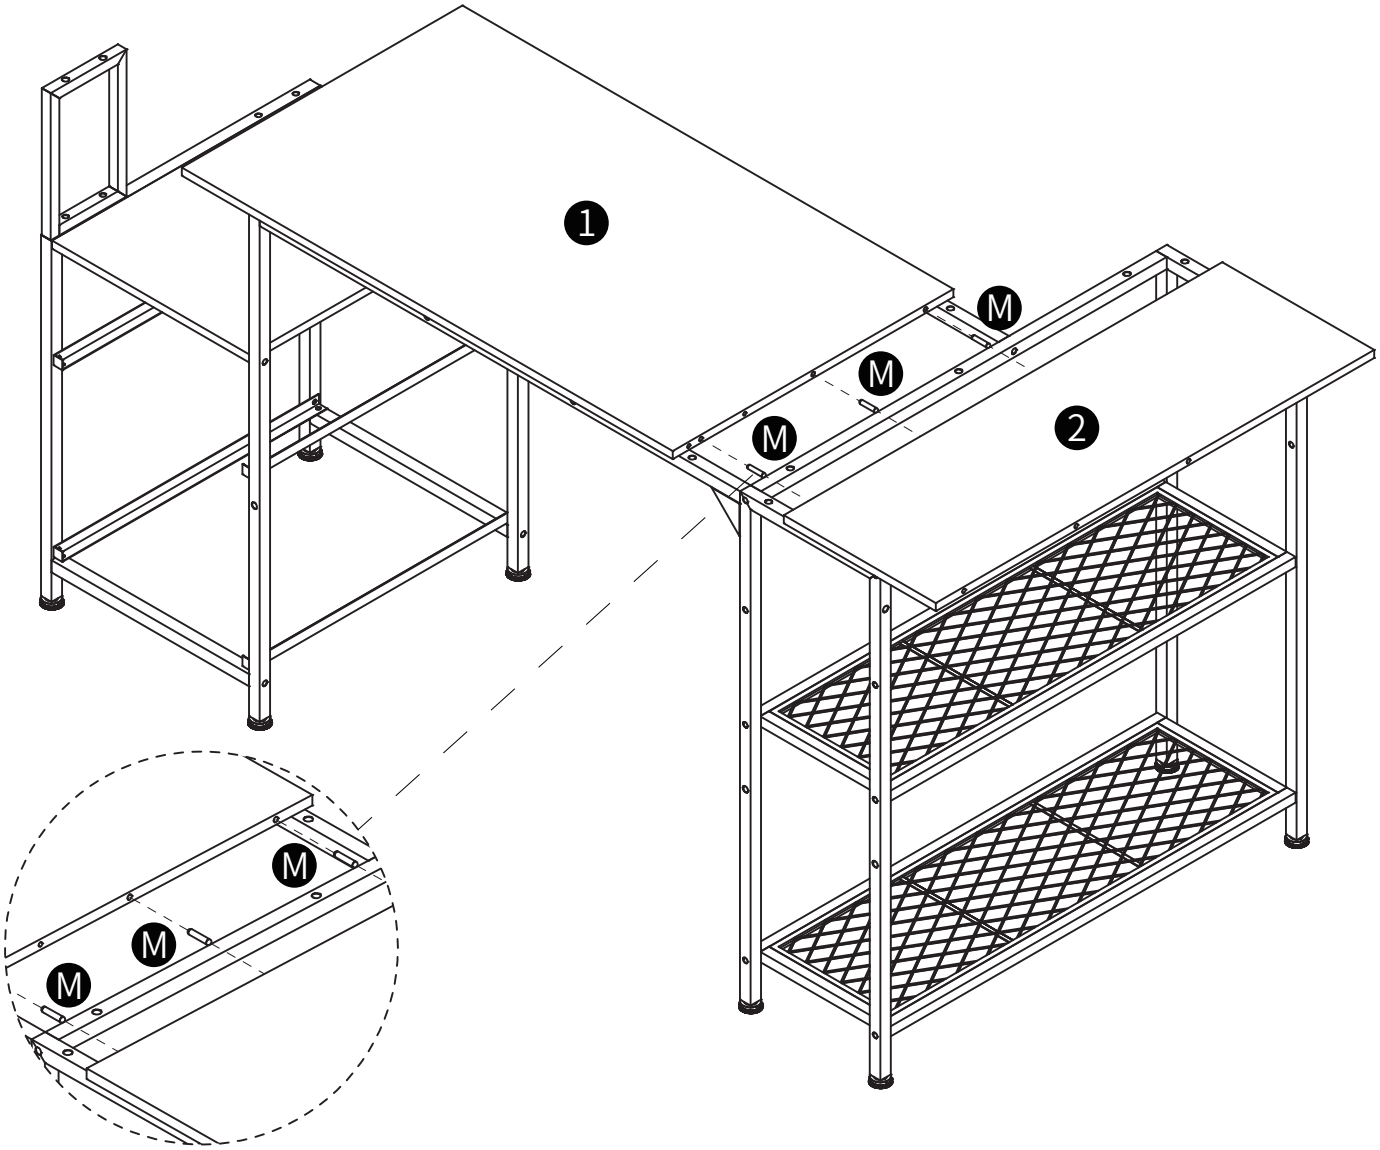

• Please loosen the screws which fix the boards, adjust the boards to make them fit together without gaps, then tighten the screws. Since the diameter of the screw hole in the bar is larger than the hole in the bolt, the position of the board can be adjusted.

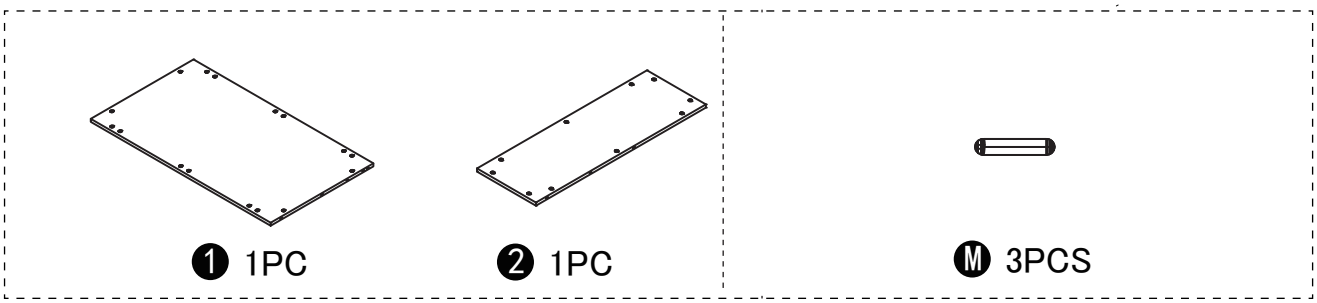

• If the above method doesn't work, please contact us with a photo of the holes, we willhelp you further.
