ASSEMBLY GUIDE

72-Bottle Pine Wine Rack

8 tiers / 9 bottles per tier / Tool-free interlocking assembly

ASSEMBLED SIZE

41" W x 9.84" D x 33.50" H

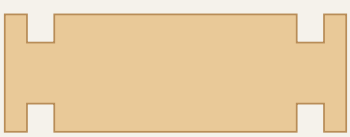

Before you begin

Unpack on a clean, protected surface. Sort the wooden pieces by shape and check for damage. No tools or hardware are required. Assemble the rack empty, on a firm, level floor.

Identify the wooden pieces

A SIDE PANEL

4 slots: 2 on top + 2 on the bottom

The same four-slot profile on every A panel.

B BOTTLE-SUPPORT RAIL

End slots fit into the side-panel slots.

Curved cradles face up.

For each tier, use two side panels (A) and two bottle-support rails (B). Repeat the assembly sequence to build all 8 tiers. Illustrations show the assembly method and are not drawn to scale.

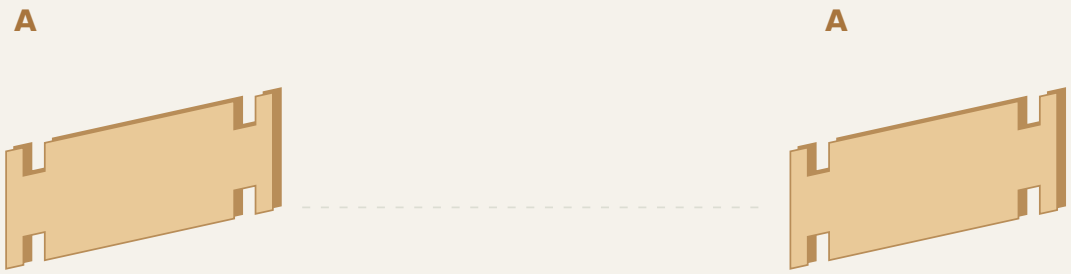

BUILD FROM THE BOTTOM UP

Assemble the first tier

The front and rear rails work together to support each bottle horizontally.

1 Position the side panels

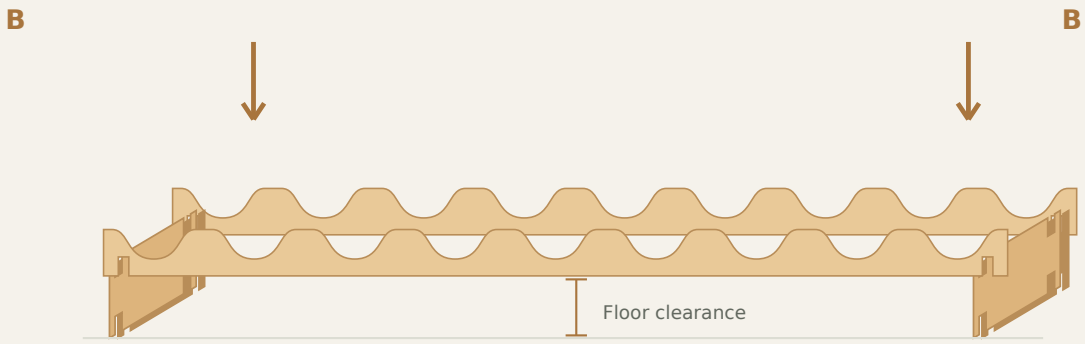

Each side panel (A) has four slots: two along the top and two along the bottom. Stand two panels upright and parallel, with the matching slots aligned.

Keep both panels upright and parallel.

2 Fit the rails into the side-panel slots

With the curved cradles facing up, align the end slots in each rail (B) with the upper slots in the side panels (A). Lower both ends evenly until fully seated. The rails fit into the panels, not underneath them.

Only the two bottom side panels rest on the floor.
Leave the open space beneath the bottom rails clear.

CHECK THE FIT

Check all four joints: each rail must be seated in the side-panel slots. The bottom rails must remain above the floor. If a piece does not fit easily, lift it out and realign the slots. Do not hammer or force it.

COMPLETE AND CHECK

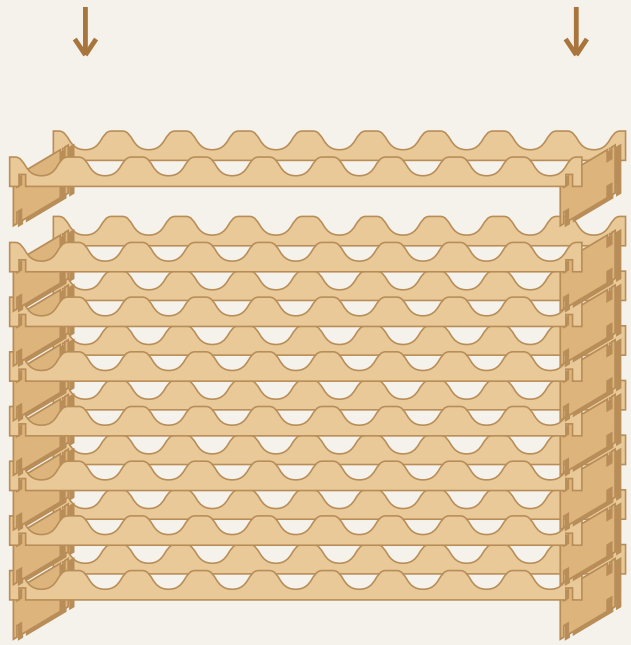

Stack, check, then load

Repeat the same interlocking sequence until all 8 tiers are assembled.

3 Build the remaining tiers

Fit the next two side panels (A) onto the joints below, then install the front and rear rails (B). Repeat until all 8 tiers are complete. Keep all cradles facing up and fully seat each joint as you go.

REPEAT UPWARD

Before adding bottles

- ☐ Count 8 complete tiers.
- ☐ Check 9 aligned bottle positions on every tier.
- ☐ Fully seat every joint. Only the two bottom panels touch the floor.
- ☐ Keep a visible gap beneath the bottom support rails.
- ☐ Make sure the rack stands level and does not wobble.

4 Load bottles carefully

Use standard wine bottles that fit the cradles. Place bottles horizontally across the matching front and rear supports. Load lower tiers first and distribute bottles evenly.

USE & CARE

Place the rack on a hard, level surface. Do not climb, sit or stand on it. Keep children from climbing or pulling on the rack. Remove all bottles before moving or disassembling. Wipe with a soft, dry cloth; avoid soaking the wood.

Capacity: up to 72 standard wine bottles. Bottle shape and diameter affect fit. Assembly illustrations are schematic; use the supplied wooden pieces as the final reference.
