

Hello Dear Customer

Before assembly, first make sure to have the product image with you at all times. For this particular product, you need at least 2 people to assemble and need a power drill. This is a high end product and the assembly can take around 50 minutes.

We have numbered the metal frames (it should go from 1 UP to 6 UP). Please arrange the metal frames to the numbers ACCORDINGLY from left to right and if it says “up” please put the frame as it says. The shelves have been also numbered, and by looking at the picture you will know which shelf goes where. Put the metal frames flat on the floor and start putting the shelves into the metal frames. There are lines underneath each shelf and that tells that the screws are going to go on top of the lines.

When finished with assembling the product, you will realize it's not sturdy because the backpieces haven't been put up yet. There should be 3 back pieces and by looking at the product picture you will put the back pieces. We hope this little instruction has been helpful to you and that you didn't face any hardships while assembling the product. Please reach out to us at [casamodecor@gmail.com](mailto:casamodecor@gmail.com) if you are having trouble with the assembly. We would be more than glad to assist! Please download the video below for assembly.
