Step 10

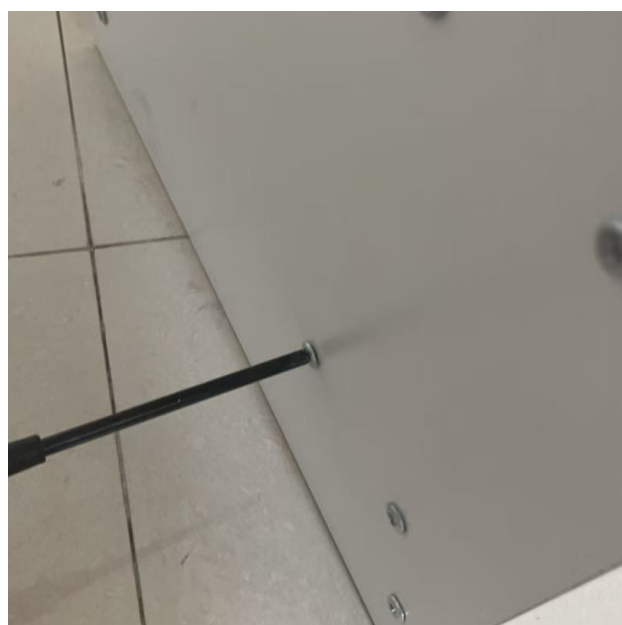

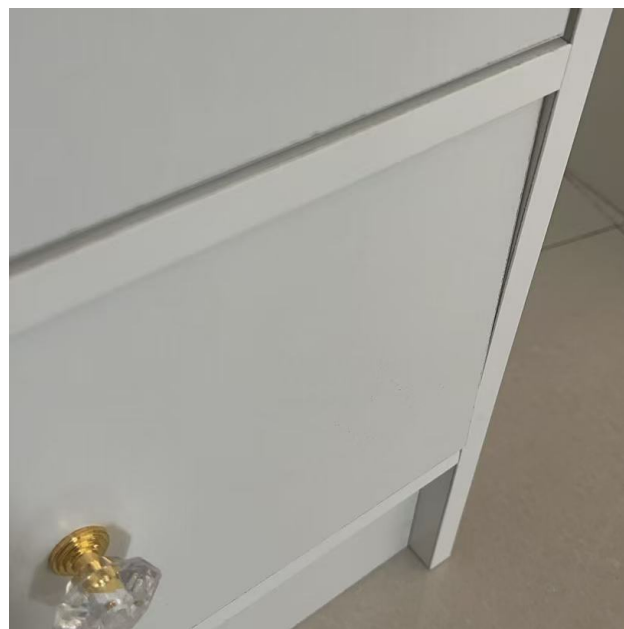

By adjusting the two adjustment screws on the hinge, the gap between the door and the cabinet, as well as the relative position between the door and the cabinet, can be adjusted to ensure alignment and flatness.

Step 11

Please note that when placing the drawer in, the drawer positioning pin will block the drawer. Therefore, please follow the diagram to first insert the inner edge of the drawer using a concave method, and then push the drawer flat.

If the drawer cannot be fully inserted or the edge of the drawer is not flush with the edge of the cabinet, please loosen the fixing screws of the drawer support plate, adjust the angle of the drawer support plate until the drawer can be placed flat and kept flush with the edge of the cabinet, and then tighten the fixing screws of the drawer support plate.
